FOR RELEASE NOVEMBER 18, 2015

# Global Support for Principle of Free Expression, but Opposition to Some Forms of Speech

## Americans Especially Likely to Embrace Individual Liberties

BY Richard Wike and Katie Simmons

FOR FURTHER INFORMATION ON THIS REPORT:

Richard Wike, Director, Global Attitudes Research Katie Simmons, Associate Director, Research Rhonda Stewart, Senior Communications Manager

202.419.4372 www.pewresearch.org

### **About This Report**

This report examines global public opinion about democratic principles. It is based on 40,786 face-to-face and telephone interviews in 38 countries with adults 18 and older conducted from April 5 to May 21, 2015. For more details, see survey methodology and topline results.

Chapter 1 explores support for democratic principles around the world, including religious freedom, gender equality, a free press, free speech and competitive elections. Chapter 2 considers the boundaries of support for free expression by examining public opinion on whether making statements that are offensive to minority groups or to a person's religion or beliefs, that call for violent protests, that are sexually explicit, or that criticize the government's policies should be allowed publicly.

This report is a collaborative effort based on the input and analysis of the following individuals:

Richard Wike, *Director*, *Global Attitudes Research* Katie Simmons, *Associate Director*, *Research* 

James Bell, Vice President, Global Strategy Danielle Cuddington, Research Assistant Michael Keegan, Information Graphics Designer Dorothy Manevich, Research Assistant Jacob Poushter, Senior Researcher Steve Schwarzer, Research Methodologist Ben Wormald, Associate Digital Producer Jill Carle, Research Associate Claudia Deane, Vice President, Research David Kent, Copy Editor Bridget Parker, Research Assistant Audrey Powers, Administrative Coordinator Bruce Stokes, Director, Global Economic Attitudes Hani Zainulbhai, Research Analyst

### **About Pew Research Center**

Pew Research Center is a nonpartisan fact tank that informs the public about the issues, attitudes and trends shaping America and the world. It does not take policy positions. It conducts public opinion polling, demographic research, media content analysis and other empirical social science research. The center studies U.S. politics and policy views; media and journalism; internet and technology; religion and public life; Hispanic trends; global attitudes and U.S. social and demographic trends. Pew Research Center is a subsidiary of The Pew Charitable Trusts, its primary funder. All of the center's reports are available at <u>www.pewresearch.org</u>.

## Global Support for Principle of Free Expression, but Opposition to Some Forms of Speech

### Americans Especially Likely to Embrace Individual Liberties

Although many observers have documented a global <u>decline</u> in democratic rights in recent years, people around the world nonetheless embrace fundamental democratic values, including free expression. A new Pew Research Center survey finds that majorities in nearly all 38 nations polled say it is at least somewhat important to live in a country with free speech, a free press and freedom on the internet. And across the 38 countries, global medians of 50% or more consider these freedoms *very* important.

Still, ideas about free expression vary widely across regions and nations. The United States stands out for its especially strong opposition to government censorship, as do countries in Latin America and Europe – particularly Argentina, Germany, Spain and Chile. Majorities in Asia, Africa and the Middle East also tend to oppose censorship, albeit with much less intensity. Indonesians, Palestinians, Burkinabe and Vietnamese are among the least likely to say free expression is very important.

#### Support for Free Speech, Press Freedom and Internet Freedom

Regional median saying it is very important that \_\_\_\_ without state/gov't censorship in our country

Note: Global median of 38 countries. Russia and Ukraine not included in Europe median.

Source: Spring 2015 Global Attitudes survey. Q56b, d, f.

While free expression is popular around the globe, other democratic rights are even more widely embraced. In Western and non-Western nations, throughout the global North and South, majorities want freedom of religion, gender equality, and honest, competitive elections. Yet the strength of commitment to individual liberties also varies. Americans are among the strongest supporters of these freedoms. Meanwhile, Europeans are especially likely to want gender equality and competitive elections, but somewhat less likely than others to prioritize religious freedom. The right to worship freely is most popular in sub-Saharan Africa. Across all regions, people who say religion is very important in their lives are more likely to value religious freedom.

#### Most Say Religious Freedom, Gender Equality, Elections Are Very Important

#### PEW RESEARCH CENTER

Even though broad democratic values are popular, people in different parts of the world have different ways of conceptualizing individual rights and the parameters of free expression. Publics tend to support free speech in principle, but they also want limitations on certain types of speech. While a global median of 80% believe people should be allowed to freely criticize government policies, only 35% think they should be allowed to make public statements that are offensive to minority groups, or that are religiously offensive. Even fewer support allowing sexually explicit statements or calls for violent protests.

Americans, however, are more willing than the rest of the world to tolerate these forms of speech. Large majorities in the U.S. think people should be able to say things that are offensive to minority groups or their religious beliefs. About half (52%) say this about sexually explicit statements, and more than four-in-ten (44%) think calls for violent protests should be allowed.

These are among the main findings of a new Pew Research Center survey, conducted in 38 nations among 40,786 respondents from April 5 to May 21, 2015.

## When Can Government Stop the Media from Publishing?

Overall, global publics oppose government censorship of the media, except in cases of national security. There is widespread agreement that media organizations should be able to publish information about large political protests in the country – across the nations

#### Americans More Supportive of All Forms of Freedom of Expression than Others Worldwide

*People should be able to make statements that* \_\_\_\_ *publicly* 

polled, a median of 78% say this. Vietnam is the only country where fewer than half (42%) hold this view.

Most (a global median of 59%) also think media groups should be able to publish information that might destabilize the national economy. The Middle East is the regional outlier on this question – a median of just 44% in the region say the press should be allowed to publish economically destabilizing information, while 51% believe the government should be able to block these types of stories in some circumstances.

Globally, a median of just 40% think media organizations should be able to publish information about sensitive issues related to national security, while 52% believe it is acceptable for the government to suppress such information. But opinions vary widely across

## Relatively Low Support Globally for Press Freedom on National Security Issues

Do you think that media organizations should be able to publish information about these types of things or that the government should be able to prevent media organizations from publishing information about these types of things in some circumstances?

countries and regions. Latin Americans and Europeans tend to think the press should be allowed to publish sensitive national security information, while Middle Easterners, Asians and Africans mostly oppose this idea. On this issue, most Americans support government limitations on press freedom – 59% say the government should be allowed to stop this type of publication.

#### **Ranking Countries on Support for Free Expression**

To further explore how countries compare on views about free expression, we constructed an index based on respondents' answers to five questions about allowing specific types of speech, as well as three questions about whether the media should be allowed to publish certain types of information (see <u>Appendix A</u> for more details on the index).

Analyzing the data in this way reveals that Americans are the most supportive of free speech and a free press. Several European and Latin American nations also emerge as relatively strong supporters, as do Canada, Australia and South Africa. Meanwhile, Senegal, Jordan, Pakistan, Ukraine, Burkina Faso and Vietnam are at the bottom of the index, indicating relatively low levels of support for free expression.

#### Americans, Europeans and Latin Americans Most Supportive of Free Expression

\*Support for free expression is measured using an eight-item index ranging from 0-8, with 8 representing the most supportive of free expression. Respondents were coded as 0 or 1 for each of the eight questions, where 1 indicates support for allowing free speech or press in a particular situation and 0 indicates support for government restrictions on free expression in some circumstances. Of the questions included in the index, five questions ask about free speech and three questions ask about free press. The mean score for each country is used in this analysis. Malaysia not included in index. (See Appendix A for more details.)

Source: Spring 2015 Global Attitudes survey. Q30a-e & Q31a-c.

#### **Prioritizing Internet Freedom**

In many nations the internet has created an important new public space where debates about political and social issues thrive. Even though internet freedom ranks last among the six broad democratic rights included on the survey, majorities in 32 of 38 countries nonetheless say it is important to live in a country where people can use the internet without government censorship. Across the 38 nations, a median of 50% believe it is *very* important to live in a country with an uncensored internet.

## Publics with Higher Rates of Internet Usage More Likely to Prioritize Internet Freedom

Source: Spring 2015 Global Attitudes survey. Q56f, Q70 & Q72.

Intense support for internet freedom is highest in Argentina, the U.S., Germany and Spain – roughly seven-in-ten in these four nations consider it very important. It is lowest in Burkina Faso and Indonesia (21% very important in both countries).

Internet freedom tends to be especially important to younger people, as well as to those who say they use the internet at least occasionally or own a smartphone. There is a strong correlation between the percentage of people in a country who use the internet and the percentage who say a free internet is very important, suggesting that as access to the Web continues to spread around the globe in the coming years, the desire for freedom in cyberspace may grow as well.

### **1.** Support for Democratic Principles

There is broad support around the world for many of the basic tenets of democracy. In all 38 nations surveyed, majorities say it is at least somewhat important to live in a country with religious freedom, a free press, free speech and competitive elections. In 37 countries, half or more believe it is important for women to have the same rights as men and for people to be able to use the internet without government censorship (Burkina Faso is the exception).

Freedom of religion emerges as an especially significant principle. Across the countries polled, a median of 74% say it is *very* important for people to be free to practice their

#### **Democratic Principles Valued Highly**

*How important is it that* \_\_\_\_ *in our country?* 

Source: Spring 2015 Global Attitudes survey. Q56a-f.

PEW RESEARCH CENTER

religion. Medians of at least 60% say the same about gender equality and holding honest elections regularly with the choice of at least two political parties. There is somewhat less intense support for three values that relate to expression and the exchange of information – free speech, free press and internet freedom – but medians of 50% or more still say these liberties are very important.

There are notable differences around the world in the strength of commitment to democratic values. The right to worship freely is particularly significant in sub-Saharan Africa – across the eight nations polled in the region, a median of 87% say this is very important, including 90% in Nigeria and Senegal. Americans are also among the most supportive of religious freedom – 84% in the U.S. say it is very important. Overall, this right is highly valued in the Asia-Pacific region as well, although there is a wide range of opinions, with more than eight-in-ten Pakistanis, Indians and Indonesians describing religious freedom as very important, compared with just 24% in Japan, the lowest share among the countries surveyed. Medians of 73% in the Middle East and 72% in Latin America rate it as very important. The intensity of support is somewhat lower in

European Union nations, at 63%, though more than half in all six EU countries surveyed nonetheless say the right to worship freely is very important.

The other five democratic freedoms tested illustrate a different regional pattern. Support for all five is particularly strong in the U.S., Canada, Latin America and Europe. While majorities generally say these values are important in the Middle East, Africa and the Asia-Pacific region, the intensity of support is lower in these regions.

Gender equality is the highest-rated principle in Europe (86% very important) and Latin America (80%). In five of the 38 nations surveyed – Canada, Germany, the UK, Australia and the U.S. – more than nine-in-ten believe it is very important for women to have the same rights as men. This view is less prevalent in the Middle East and Africa.

Elections are clearly considered a central component of democracy, and across the 38 nations in the study, a median of 61% think it is very important to have honest, competitive elections with the choice of at least two political parties. However, there are five nations where fewer than half deem this very important: India, Tanzania, Pakistan, Indonesia and Vietnam.

Overall, global attitudes toward freedom of speech and freedom of the press are quite similar. A 38-nation median of 56% believe it is very important to live in a country where people can say what they want without government censorship. And 55% think it is very important that the media can report the news without being censored.

Opposition to internet censorship is also common around the world. A global median of 50% say an uncensored internet is very important. The highest support for internet freedom tends to be in nations with higher rates of internet usage. And within countries, individuals who report that they use the internet at least occasionally or own a smartphone are more likely to consider freedom in cyberspace very important. This gap between internet users and nonusers is found in economically advanced, emerging and developing nations alike. The divide is widest in Germany, where 74% of internet users say it is very important for the internet to be free of state censorship, compared with just 44% of nonusers. Gaps of 20 percentage points or more are also found in Senegal, Japan, Spain, France, Australia, Israel, the U.S., Italy, Brazil, Uganda and Burkina Faso.

#### Support for Democratic Values Linked to Education, Income

In many nations, people with more education express stronger support for democratic principles, including free expression.<sup>1</sup> For instance, in 16 countries, those with higher levels of education are more likely than those with less education to say allowing the media to report the news without state censorship is *very* important. In 12 nations, the more educated are more supportive of free speech, and in 23 they place greater value on internet freedom.

#### Those with More Education Are More Supportive of Media Freedom

Very important that the media can report the news without state or gov't censorship in our country

	Less education %	More education %	Diff
Germany	<sup>%</sup>	% 82	+22

Italy	58	69	+11
India	34	45	+11
France	41	51	+10
Philippines	48	57	+9
Spain	72	80	+8
Palest. ter.	34	42	+8

Note: Only statistically significant differences shown.

Source: Spring 2015 Global Attitudes survey. Q56b.

<sup>&</sup>lt;sup>1</sup> For the purpose of comparing educational groups across countries, we standardize education levels based on the UN's International Standard Classification of Education (ISCED). The lower education category is below secondary education and the higher category is secondary or above in Argentina, Brazil, Burkina Faso, Chile, Ghana, Kenya, India, Indonesia, Jordan, Lebanon, Malaysia, Mexico, Nigeria, Pakistan, Palestinian territories, Peru, Philippines, Poland, Russia, Senegal, South Africa, Tanzania, Turkey, Uganda, Ukraine, Venezuela and Vietnam. The lower education category is secondary education or below and the higher category is post-secondary or above in Australia, Canada, France, Germany, Israel, Italy, Japan, South Korea, Spain, UK and U.S.

People with higher incomes also tend to place greater importance on democratic rights in many countries.<sup>2</sup> Looking again at press freedom, in 13 countries, those with higher household incomes are more likely than lower-income people to say allowing the media to report the news without government censorship is very important. People with higher incomes are more likely to say free speech is very important in 12 nations, and are more supportive of freedom on the internet in 21 countries.

<sup>&</sup>lt;sup>2</sup> Respondents with a household income below the approximate country median are considered lower income. Those with an income at or above the approximate country median are considered higher income.

#### Religious Freedom and Importance of Religion

Freedom of religion is widely embraced around the world, but it is particularly significant to people who place high importance on religion in their lives. In 34 nations, those who say religion is *very* important in their own lives are more likely to believe it is very important to live in a country where people can practice their religion freely.

The gap on this question between those who indicate religion is very important and those saying it is less important is more than 25 percentage points in Pakistan, Japan, Vietnam, Turkey, South Korea, Australia, Poland and Senegal.<sup>3</sup>

## Support for Religious Freedom by Personal Importance of Religion

*Very important that people can practice their religion freely in our country* 

	Religion is less important personally %	Religion is very important personally %	Diff
Pakistan	51	87	+36
Japan	20	53	+33

Italy	72	81	+9

Note: Only statistically significant differences shown.

Source: Spring 2015 Global Attitudes survey. Q56a.

<sup>&</sup>lt;sup>3</sup> Religion is less important personally includes respondents who said religion is "somewhat important," "not too important" and "not at all important."

#### A Wide Gender Gap on Equal Rights for Women

On the issue of gender equality, there are sharp differences between men and women in most of the countries in the study. In 24 nations, women are more likely than men to say it is *very* important for women to have equal rights in their country. Gender gaps are particularly common in many emerging and developing nations. For instance, the difference between men and women is more than 20 percentage points in Tanzania, Pakistan, Uganda and Senegal.

Japan is the only nation surveyed where men (67% very important) express stronger support for gender equality than women do (53%).

Education is also a strong predictor of how people view gender equality. In 20 nations, those with higher levels of education are more likely than those with less education to consider equal rights for women very important.

#### Women More Likely to Prioritize Gender Equality

Very important that women have the same rights as men in our country

	Men	Women	Diff
	%	%

### 2. The Boundaries of Free Speech and a Free Press

In general, most publics around the world say that free speech and a free press are very important to have in their country. However, support for both is contingent on the topic of the speech. While majorities think people should be able to critique the government in public, there is less support for being able to say things that are offensive either to minorities or religious groups. And very few approve of public speech that is sexually explicit or that calls for violent protests. Widespread majorities believe the press should be able to publish information about protests in the country or economic issues that might destabilize the economy. However, with the exception of Latin American publics, relatively few support allowing the press to freely publish on sensitive issues related to national security.

#### Broad Support for Speech Criticizing the Government, but Not Much Else

Large majorities across the globe say people should be able to criticize their government's policies publicly without interference from the state. Opinion on this issue is especially uniform in the U.S., Canada and Europe, where roughly nine-in-ten or more in each country surveyed say people should have this right.

Publics in Latin America are also particularly supportive of being able to criticize the government, with more than eight-in-ten in most countries taking this position. Peruvians stand out as less likely to approve of this type of speech, though roughly three-quarters (76%) still say people should be able to speak out against the state.

Ukrainians also broadly think people should be able to criticize government policies in public (87%), while Russians are somewhat less likely to say the same (72%).

Other publics around the world are less supportive of publicly criticizing the government, though majorities still approve of this type of speech in many countries. Six-in-ten or more in all eight sub-Saharan African countries surveyed say people should be able to denounce government policies in public. Eight-in-ten take this position in Burkina Faso and Tanzania, with Ghana close behind at 79%. Ugandans (61%) and Senegalese (60%) are less supportive.

A median of 74% across the five Middle Eastern countries surveyed say people should be able to complain publicly about the government. This region, however, is particularly divided on the issue. More than nine-in-ten in Lebanon and Israel support criticizing the state in public. Nearly three-quarters in the Palestinian territories say the same (74%). Jordanians (64%) and Turks (52%), meanwhile, are less likely to approve. Roughly a quarter or more in Turkey (39%) and Jordan (26%) say the government should be able to prevent people from being critical of the state.

#### **Publics Worldwide Support Right to Criticize Their Government**

People should be able to make statements that \_\_\_\_ publicly

\*Question not asked in Malaysia.

Source: Spring 2015 Global Attitudes survey. Q30a-e.

Overall, a median of 70% in the Asia-Pacific region say people should be able to denounce the government publicly. Australians stand out for being particularly supportive (95%), while Pakistanis express the lowest level of approval of this type of speech (54%).

When it comes to other topics, publics around the world are more divided. Americans (67%) and Canadians (52%) express some of the highest support for being able to say things in public that are offensive to minorities, as do those in a few countries in Latin America and Europe. At least half in the Philippines, Australia, Tanzania and South Africa also say people should be able to say these types of things publicly. In most of the other countries surveyed, however, majorities say the government should be able to prevent speech that is offensive to minority groups.

A similar pattern emerges on the issue of religion. Roughly six-in-ten or more in the U.S. (77%), Canada (64%), Australia (62%), and the Philippines (59%) support allowing speech that is offensive to their own religious beliefs. Europeans and Latin Americans are divided, while most people in the Middle East, Africa and other Asian nations support the government restricting this type of speech.

Few people around the world believe that people should be able to say things that are sexually explicit, such as sexually graphic jokes, in public. Majorities in most countries think the government should be able to restrict this type of speech. The few countries where at least half support being able to say these things in public are Spain (70%), the U.S. (52%) and Poland (50%).

Broad majorities in nearly every country surveyed also think the government should be able to prevent people from calling for violent protests in public. Opposition to this type of speech is particularly widespread in Lebanon (94%), Senegal (89%) and Germany (88%). Filipinos, South Africans and Americans are somewhat more divided, while only in Poland does a majority (60%) say this type of speech should be allowed in public.

#### Free Press Supported except on Matters of National Security

At least three-quarters in each country surveyed in Europe and Latin America, as well as in the U.S. and Canada, say the media should be able to publish information about protests in the country without government interference. Similarly, 82% in Ukraine support this type of free press. Two-thirds in Russia agree.

There is also widespread support in Africa for the media publishing information about protests. More than six-in-ten in each country surveyed approve of this type of free press, including more than three-quarters in Burkina Faso (83%), Ghana (79%), Kenya (78%) and Tanzania (77%).

Opinion on this aspect of a free press is more divided in the Middle East and Asia-Pacific regions. Overall, a median of 72% in the Middle Eastern countries surveyed say the press should be able to publish information about protests in the country. Lebanese (92%) and Israelis (91%) are particularly supportive, but Turks are more divided (50% say press should be able to publish, 40% say government should restrict).

In the Asia-Pacific region, Australians (89%) express the highest level of support for the press publishing information about protests, while much smaller majorities in Indonesia (58%) and Pakistan (56%) agree. The Vietnamese are divided on the issue (42% press publish, 49% government restrict).

#### Support for Media Coverage of Political Protests

\_\_\_\_ about large political protests in our country

Source: Spring 2015 Global Attitudes survey. Q31a.

When it comes to reporting on economic issues that might destabilize the country's economy, support for a free press continues to be highest in the U.S., Canada, Europe and Latin America.

Support is lower in Africa and in the Asia-Pacific region. While majorities in many of the countries say the press should be able to publish information that might harm the economy, significant percentages also believe that the government should be able to restrict this type of press. This includes half or more in Senegal, Burkina Faso, Nigeria, Pakistan and Vietnam.

In the Middle East, Israel is the only country where a majority of the public says the press should be able to report on economic issues that might be destabilizing. In the other four countries surveyed, roughly half or more say the government should be able to regulate this type of reporting, including nearly six-in-ten in Jordan (58%).

#### Support for Media Coverage of Economically Destabilizing Issues

\_\_\_\_ about economic issues that might destabilize the country's economy

Source: Spring 2015 Global Attitudes survey. Q31b.

Roughly half or more in 27 of the 38 countries surveyed say the government should be able to prevent the media from publishing information about sensitive issues related to national security. This includes majorities in many of the publics that expressed widespread support for free speech and a free press on other topics, such as the UK (66% say government should be able to restrict), the U.S. (59%), Canada (56%) and France (54%).

Latin American countries, on the other hand, continue to support this type of free press. At least six-in-ten in Venezuela, Argentina, Mexico, Chile and Peru say the media should be able to publish on sensitive national security issues. The few other countries where clear majorities agree are Poland (76%), Uganda (66%), Spain (60%) and Italy (58%).

#### **Divides over Free Speech and Free Press**

In general, people who say it is very important to have free speech and a free press in their country are also more supportive than others of allowing speech across various controversial topics. For example, in the U.S., 60% of those who prioritize free speech think that right should extend to people's freedom to say sexually explicit things in public. Among those for whom free speech is less of a priority, just 31% agree. Similarly, in Italy, 66% of people who say a free press is very important believe that the media should be able to publish sensitive issues related to national security. By comparison, 45% of Italians who do not prioritize a free press as intensely say the same.

There are also some notable demographic differences on these issues. In many countries, people with a higher level of education are more likely than those with less education to support being able to criticize government policies in public. A similar educational divide is found over allowing the media to cover large political protests in the country.

People who are religiously devout are less supportive of being able to say things that are offensive to religious groups or that are sexually explicit, especially in Europe, the U.S. and Canada. For example, 46% of Americans who pray daily think people should be able to make statements in public that are sexually explicit, while 58% of Americans who pray less often say the same. In France, 43% of people who say religion is very important in their lives believe

## Educational Divide on Freedom to Critique Government in Public

People should be able to make statements that criticize the government's policies publicly

e	Less ducation	More education	Diff
	%	%	
South Korea	59	79	+20
Senegal	57	76	+19
Burkina Faso	78	94	+16
Uganda	59	75	+16
Pakistan	49	63	+14
Tanzania	79	92	+13
Japan	62	75	+13
France	85	96	+11
Peru	69	80	+11
Brazil	86	96	+10
Mexico	81	91	+10
Poland	81	91	+10
Germany	88	97	+9
India	68	77	+9

**PEW RESEARCH CENTER** 

people should be able to say things that are offensive to religious groups in public. A majority (55%) of those for whom religion is less important agree.

In 16 of the 38 countries surveyed, people ages 18 to 29 are more likely than those ages 50 and older to say that people should be able to make sexually explicit statements in public. And young people in Europe, Canada, the U.S., Australia, South Korea, Russia and Senegal are more supportive than their elders of the press being able to publish sensitive information about national security issues.

Finally, there is evidence that in some countries people who are part of a minority group are less supportive of being able to say things that are offensive to minority groups in general. For example, in the U.S., non-whites (57%), including Hispanics, are much less likely to agree that people should be able to say these types of statements in public than are whites (72%). Similarly, Arabs in Israel (15%) are less supportive of this form of speech than Jews (39%).

#### Young Favor Transparency on National Security Issues

Media organizations should be able to publish information about sensitive issues related to national security

## **Appendix A**

#### **Free Expression Index**

To explore how countries compare on attitudes about free expression, we developed an additive free expression index. The index combines responses for eight survey questions that ask about whether certain types of speech and press should be censored.

Of the questions included in the index, five questions ask about free speech, including whether people should be allowed to make public statements that criticize the government's policies, are offensive to minority groups, call for violent protests, are offensive to their religion or beliefs or are sexually explicit. Three questions ask about free press, including whether media organizations should be allowed to publish information about large political protests in that country, sensitive issues related to national security or economic issues that might destabilize the country's economy.

Responses for each of the eight questions are dichotomous (0 or 1), where 1 indicates support for allowing free speech or press in a particular situation and o indicates support for government restrictions on free expression in some circumstances. For instance, those who believe people should be allowed to publicly make statements that are offensive to minorities are coded as a 1, while those who say such statements should be prohibited by the government are coded as a o. Similarly, those who say media organizations should be able to publish information about large political protests in their country are coded as a 1, while those who disagree are coded as a o. The responses for the eight questions are added

## U.S. Most Supportive of Free Expression, Senegal Least

Free expression index

Note: Malaysia not included in index.

Source: Spring 2015 Global Attitudes survey. Q30a-e & Q31a-c.

together for an index ranging from 0 to 8, where 0 is the least supportive of civil liberties and 8 is the most supportive.

Index scores are only calculated for respondents who gave substantive answers to all eight questions, comprising a large sub-sample of the total sample (n=32,349). Those who replied "Don't know/Refused" on any of the eight questions were not included in the index. The question about whether people should be allowed to make sexually explicit statements publicly was not asked in Malaysia. Consequently, no index score was calculated for that country. The alpha coefficient for the index was 0.73.

We report the mean score for each country in our analysis. On a scale of 0 to 8, index scores range between 2.06 in Senegal and 5.73 in the United States, with an overall average of 4.07 for all valid responses.

### Methodology

About the Pew Research Center's Spring 2015 Global Attitudes Survey

Results for the survey are based on telephone and face-to-face interviews conducted under the direction of Princeton Survey Research Associates International. The results are based on national samples, unless otherwise noted. More details about our international survey methodology and country-specific sample designs are available on our <u>website</u>.

For more detailed information on survey methods for this report, see here: <a href="http://www.pewglobal.org/international-survey-methodology/?year\_select=2015">http://www.pewglobal.org/international-survey-methodology/?year\_select=2015</a>

For more general information on international survey research, see here: <u>http://www.pewresearch.org/methodology/international-survey-research/</u>

### **Topline Results**

#### Pew Research Center Spring 2015 survey November 18, 2015 Release

Methodological notes:

- Survey results are based on national samples. For further details on sample designs, see Methodology section and our <u>international survey methods database</u>.
- Due to rounding, percentages may not total 100%. The topline "total" columns show 100%, because they are based on unrounded numbers.
- Since 2007, the Pew Research Center has used an automated process to generate toplines for its Global Attitudes surveys. As a result, numbers may differ slightly from those published prior to 2007.
- Throughout this report, trends from India in 2013 refer to a survey conducted between December 7, 2013, and January 12, 2014 (Winter 2013-2014).
- Spring, 2011 survey in Pakistan was fielded before the death of Osama bin Laden (April 10 April 26), while the Late Spring, 2011 survey was conducted afterwards (May 8 May 15).
- Results for Ukraine in 2014 may differ from previously published figures. To make the 2014 sample comparable to 2015, Luhans'k, Donets'k and Crimea were excluded from the 2014 sample. These areas were not surveyed in 2015 due to security concerns. Throughout the topline results, 2014 Ukraine figures are noted with an asterisk.
- For some countries, trends for certain years are omitted due to differences in sample design or population coverage. Omitted trends often reflect less representative samples than more recent surveys in the same countries. Trends that are omitted include:
  - Ukraine prior to 2014
  - Vietnam prior to 2014
  - India prior to Winter 2013-2014
  - Senegal prior to 2013
  - Venezuela prior to 2013
  - Brazil prior to 2010

- Nigeria prior to 2010
- South Africa in 2007
- Indonesia prior to 2005
- Pakistan in May 2003
- Poland in March 2003
- Russia in March 2003 and Fall 2002
- Not all questions included in the Spring 2015 survey are presented in this topline. Omitted questions have either been previously released or will be released in future reports.
