Americans and Digital Knowledge

A majority of U.S. adults can answer fewer than half the questions correctly on a digital knowledge quiz, and many struggle with certain cybersecurity and privacy questions

BY Emily A. Vogels and Monica Anderson
About Pew Research Center

Pew Research Center is a nonpartisan fact tank that informs the public about the issues, attitudes and trends shaping America and the world. It does not take policy positions. The Center conducts public opinion polling, demographic research, content analysis and other data-driven social science research. It studies U.S. politics and policy; journalism and media; internet, science and technology; religion and public life; Hispanic trends; global attitudes and trends; and U.S. social and demographic trends. All of the Center’s reports are available at www.pewresearch.org. Pew Research Center is a subsidiary of The Pew Charitable Trusts, its primary funder.

Americans and Digital Knowledge

A majority of U.S. adults can answer fewer than half the questions correctly on a digital knowledge quiz, and many struggle with certain cybersecurity and privacy questions

A new Pew Research Center survey finds that Americans’ understanding of technology-related issues varies greatly depending on the topic, term or concept. While a majority of U.S. adults can correctly answer questions about phishing scams or website cookies, other items are more challenging. For example, just 28% of adults can identify an example of two-factor authentication – one of the most important ways experts say people can protect their personal information on sensitive accounts. Additionally, about one-quarter of Americans (24%) know that private browsing only hides browser history from other users of that computer, while roughly half (49%) say they are unsure what private browsing does.

This survey consisted of 10 questions designed to test Americans’ knowledge of a range of digital topics, such as cybersecurity or the business side of social media companies. The median number of correct answers was four. Only 20% of adults answered seven or more questions correctly, and just 2% got all 10 questions correct.

As was true in a previous Center survey, Americans’ knowledge of digital topics varies substantially by educational attainment as well as by age. Adults with a bachelor’s or advanced degree and those under the age of 50 tend to score higher on these questions. These are some of the key findings from a Pew Research Center survey of 4,272 adults living in the United States conducted June 3-17, 2019.
### Many Americans are unsure about a number of digital topics

“Americans and Digital Knowledge”

PEW RESEARCH CENTER

---

### Americans are more knowledgeable about certain digitally focused topics than others

Americans’ understanding of these topics varies drastically across the 10 questions presented in the Center’s survey. To begin with, only three questions were answered correctly by a majority of adults. About two-thirds of U.S. adults (67%) know that phishing scams can occur across multiple platforms, including email, text messages, social media or websites. Some 63% of Americans understand that cookies are text files that allow websites to track users’ site visits and activities.
Similarly, 59% know that advertising is the largest source of revenue for most social media sites, rather than things such as exclusive licensing deals (4%) or corporate consulting (2%).

Additionally, 48% of adults correctly answered that a privacy policy is a contract between websites and users regarding how their data will be used, while 45% know that net neutrality refers to the principle that internet service providers should treat all traffic on their networks equally.

Other concepts in the survey are far less familiar to the public. Only three-in-ten adults correctly answered that starting a URL with “https://” means that the information entered on that site is encrypted (30%). A similar share (28%) accurately identified an example of two-factor authentication. (This involves confirming individuals are who they claim to be in at least two of the following ways: inputting information only the user knows, like a password; using an outside source they possess, like a phone number or token key; or through something like a fingerprint.) A somewhat smaller share – 24% of Americans – is aware that “private browsing” or “incognito mode” only hides online activity from other individuals using the same computer. (It does not mean that the user’s activities are masked and not being captured by the websites, the internet provider, or an employer if the browsing is being done on a work computer.)

Americans’ knowledge of the business side of social media companies is also relatively low. Just 29% of Americans correctly named WhatsApp and Instagram as two companies owned by Facebook. And when presented with a photo of Twitter co-founder and CEO Jack Dorsey, only 15% of adults correctly identified him.

It is important to note that while the share of adults who can correctly answer questions about these issues varies across topics, Americans are more likely to express uncertainty about the topic than give inaccurate answers in most cases. Indeed, the two-factor authentication question is the only question answered incorrectly by more than half of respondents.

Nearly one-in-five adults (17%) say they are not sure how to identify an example of two-factor authentication, and 15% say they do not know where phishing scams occur. These shares, however, are relatively small when compared with a number of other questions in this survey where “not sure” responses are far more common than incorrect answers. For example, 49% of adults each indicate they are unsure which two companies from a list of options are owned by Facebook as well as say they do not understand what private browsing entails. Still, the largest share of “unsure” responses comes on the question in which respondents are presented with a photo of Jack Dorsey: 77% report being unsure of whom the photo depicts.
Americans with higher levels of educational attainment are more likely to answer digital knowledge questions correctly

The public’s knowledge of digital topics varies substantially by educational attainment. Adults with a bachelor’s or advanced degree answered a median of six questions correctly, compared with four correct answers by those who have attended college but have not obtained a degree and three by those with a high school diploma or less. Roughly four-in-ten adults with at least a bachelor’s degree accurately answered seven or more questions (37%), compared with 20% of those with some college experience and just 9% of those with a high school education or less.

For all 10 questions, there are double-digit gaps between those who have a bachelor’s or advanced degree and those who have a high school education or less. And on five questions, the difference sits at roughly 30 percentage points. These include how cookies...
work (where there is a gap of 32 percentage points between those with at least a bachelor’s degree and those with a high school education or less); what the largest source of revenue for social media sites is (32-point gap); what a privacy policy is (30-point gap); what “https://” means in a URL (30-point gap); and what net neutrality is (30-point gap).

Younger adults generally score higher than older adults across digital knowledge questions

Beyond educational differences, digital knowledge also varies by age, though these gaps are less pronounced than those tied to education levels.

For example, 18- to 29-year-olds correctly answered a median of five out of 10 questions, compared with a median of three among those ages 65 and older.

The degree of these differences varies across the full set of questions. There are sizable gaps between the youngest and oldest age groups on knowing how private browsing functions
(a 34-point difference); knowing that Facebook owns Instagram and WhatsApp (25 points) or being able to identify an example of two-factor authentication (23 points). But there are other questions with gaps that are far less pronounced – like identifying what “https://” means in a URL or knowing that advertising is the primary way social media companies generate revenue.

Methodology

The American Trends Panel survey methodology

The American Trends Panel (ATP), created by Pew Research Center, is a nationally representative panel of randomly selected U.S. adults. Panelists participate via self-administered web surveys. Panelists who do not have internet access at home are provided with a tablet and wireless internet connection. The panel is being managed by Ipsos.

Data in this report are drawn from the panel wave conducted June 3 to June 17, 2019. A total of 4,272 panelists responded out of 5,869 who were sampled, for a response rate of 73%. This does not include six panelists who were removed from the data due to extremely high rates of refusal or straightlining. The cumulative response rate accounting for nonresponse to the recruitment surveys and attrition is 5.1%. The break-off rate among panelists who logged onto the survey and completed at least one item is 1.7%. The margin of sampling error for the full sample of 4,272 respondents is plus or minus 1.9 percentage points.

The subsample from the ATP was selected by grouping panelists into five strata so demographic groups that are underrepresented in the panel had a higher probability of selection than overrepresented groups:

- Stratum A consists of panelists who are non-internet users. They were sampled at a rate of 100%.
- Stratum B consists of panelists with a high school education or less. They were sampled at a rate of 98.9%.
- Stratum C consists of panelists that are Hispanic, unregistered to vote, or non-volunteers. They were sampled at a rate of 44.8%.

</table>

Note: Approximately once per year, panelists who have not participated in multiple consecutive waves or who did not complete an annual profiling survey are removed from the panel. Panelists also become inactive if they ask to be removed from the panel.
Stratum D consists of panelists that are black or 18-34 years old. They were sampled at a rate of 18.2%.

Stratum E consists of the remaining panelists. They were sampled at a rate of 13.5%.

The ATP was created in 2014, with the first cohort of panelists invited to join the panel at the end of a large, national, landline and cellphone random-digit-dial survey that was conducted in both English and Spanish. Two additional recruitments were conducted using the same method in 2015 and 2017, respectively. Across these three surveys, a total of 19,718 adults were invited to join the ATP, of which 9,942 agreed to participate.

In August 2018, the ATP switched from telephone to address-based recruitment. Invitations were sent to a random, address-based sample (ABS) of households selected from the U.S. Postal Service’s Delivery Sequence File. In each household, the adult with the next birthday was asked to go online to complete a survey, at the end of which they were invited to join the panel. For a random half-sample of invitations, households without internet access were instructed to return a postcard. These households were contacted by telephone and sent a tablet if they agreed to participate. A total of 9,396 were invited to join the panel, and 8,778 agreed to join the panel and completed an initial profile survey. Of the 18,720 individuals who have ever joined the ATP, 13,459 remained active panelists and continued to receive survey invitations at the time this survey was conducted.

The U.S. Postal Service’s Delivery Sequence File has been estimated to cover as much as 98% of the population, although some studies suggest that the coverage could be in the low 90% range.¹

---

Weighting

The ATP data were weighted in a multistep process that begins with a base weight incorporating the respondents’ original survey selection probability and the fact that in 2014 and 2017 some respondents were subsampled for invitation to the panel. The next step in the weighting uses an iterative technique that aligns the sample to population benchmarks on the dimensions listed in the accompanying table.

Sampling errors and testing of statistical significance take into account the effect of weighting. Interviews are conducted in both English and Spanish, but the American Trends Panel’s Hispanic sample is predominantly U.S. born and English speaking.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey:

Topline questionnaire

2019 PEW RESEARCH CENTER’S AMERICAN TRENDS PANEL
WAVE 49 JUNE 2019
FINAL TOPLINE
JUNE 3-17, 2019
TOTAL N=4,272

THE QUESTIONS PRESENTED BELOW ARE PART OF A LARGER SURVEY CONDUCTED ON THE AMERICAN TRENDS PANEL. OTHER QUESTIONS ON THIS SURVEY HAVE EITHER BEEN PREVIOUSLY RELEASED OR HELD FOR FUTURE RELEASE.

[RANDOMIZE ORDER OF QUESTIONS KNOW1-KNOW10]
Here’s a different kind of question. (If you don’t know the answer, select “Not sure.”) As far as you know...

ASK ALL:
KNOW1
If a website uses cookies, it means that the site... [RANDOMIZE OPTIONS 1-4]

June 3-17, 2019
5 Can see the content of all the files on the device you are using
2 Is not a risk to infect your device with a computer virus
2 Will automatically prompt you to update your web browser software if it is out of date
63 Can track your visits and activity on the site {correct}
27 Not sure
1 No answer

ASK ALL:
KNOW2
Which of the following is the largest source of revenue for most major social media platforms? ... [RANDOMIZE OPTIONS 1-4]

June 3-17, 2019
4 Exclusive licensing deals with internet service providers and cellphone manufacturers
59 Allowing companies to purchase advertisements on their platforms {correct}
2 Hosting conferences for social media influencers
2 Providing consulting services to corporate clients
32 Not sure
1 No answer

ASK ALL:
KNOW3
When a website has a privacy policy, it means that the site... [RANDOMIZE OPTIONS 1-4]

June 3-17, 2019
48 Has created a contract between itself and its users about how it will use their data {correct}
17 Will not share its users’ personal information with third parties
4 Adheres to federal guidelines about deceptive advertising practices
3 Does not retain any personally identifying information about its users

www.pewresearch.org
ASK ALL: KNOW4
What does it mean when a website has "https://" at the beginning of its URL, as opposed to "http://" without the "s"? [RANDOMIZE OPTIONS 1-4]

June 3-17, 2019
30 Information entered into the site is encrypted {correct}
1 The content on the site is safe for children
2 The site is only accessible to people in certain countries
12 The site has been verified as trustworthy
53 Not sure
1 No answer

ASK ALL: KNOW5
Where might someone encounter a phishing scam? [RANDOMIZE OPTIONS 1-4]

June 3-17, 2019
12 In an email
2 On social media
1 In a text message
2 On a website
67 All of the above {correct}
* None of the above
15 Not sure
* No answer

ASK ALL: KNOW6
Which two companies listed below are both owned by Facebook? [RANDOMIZE OPTIONS 1-4]

June 3-17, 2019
11 Twitter and Instagram
8 Snapchat and WhatsApp
29 WhatsApp and Instagram {correct}
3 Twitter and Snapchat
49 Not sure
* No answer

ASK ALL: KNOW7
The term “net neutrality” describes the principle that...

[RANDOMIZE OPTIONS 1-4]

June 3-17, 2019
45 Internet service providers should treat all traffic on their networks equally {correct}
6 Social media platforms must give equal visibility to conservative and liberal points of view
2 Online advertisers cannot post ads for housing or jobs that are only
visible to people of a certain race

4 The government cannot censor online speech
42 Not sure
1 No answer

**ASK ALL:**
KNOW8

Many web browsers offer a feature known as “private browsing” or “incognito mode.” If someone opens a webpage on their computer at work using incognito mode, which of the following groups will NOT be able to see their online activities? [RANDOMIZE OPTIONS 1-4]

June 3-17, 2019

4 The group that runs their company’s internal computer network
3 Their company’s internet service provider
24 A coworker who uses the same computer {correct}
18 The websites they visit while in private browsing mode
49 Not sure
1 No answer

**ASK ALL:**
KNOW9

Some websites and online services use a security process known as two-step or two-factor authentication. Which of the following images is an example of two-factor authentication? [RANDOMIZE OPTIONS 1-4]

June 3-17, 2019

![Customer Login Form](image)

28 {correct}

![Image Example of Two-Factor Authentication](image)

3
June 3-17, 2019

ASK ALL: KNOW10

Who is this technology leader? [RANDOMIZE OPTIONS 1-4]

15 Jack Dorsey, co-founder of Twitter {correct}
3 Sergey Brin, co-founder of Google
2 Elon Musk, co-founder of Tesla
3 Travis Kalanick, co-founder of Uber
77 Not sure
* No answer
