RECOMMENDED CITATION

Pew Research Center, March 2020, “Most Americans Point to Circumstances, Not Work Ethic, for Why People Are Rich or Poor”

About Pew Research Center

Pew Research Center is a nonpartisan fact tank that informs the public about the issues, attitudes and trends shaping America and the world. It does not take policy positions. It conducts public opinion polling, demographic research, content analysis and other data-driven social science research. The Center studies U.S. politics and policy; journalism and media; internet, science and technology; religion and public life; Hispanic trends; global attitudes and trends; and U.S. social and demographic trends. All of the Center's reports are available at www.pewresearch.org. Pew Research Center is a subsidiary of The Pew Charitable Trusts, its primary funder.

© Pew Research Center 2020

How we did this

Pew Research Center has conducted extensive research on the public's economic attitudes, including opinions about economic inequality. As part of this research, we conducted this study to better understand Americans' views of the factors behind why some people are rich or poor. We also wanted to learn if attitudes had changed since September 2018.

For this analysis, we surveyed 12,638 U.S. adults in January 2020. Everyone who took part is a member of Pew Research Center's American Trends Panel (ATP), an online survey panel that is recruited through national, random sampling of residential addresses. This way nearly all U.S. adults have a chance of selection. The survey is weighted to be representative of the U.S. adult population by gender, race, ethnicity, partisan affiliation, education and other categories. Read more about the ATP's methodology. We also conducted a contemporaneous telephone survey, conducted Jan. 8-13 among 1,504 adults, to measure changes in attitudes and to determine if there were mode differences between the survey conducted online and the survey on the telephone.

[Here are the questions used for the report](#), along with responses, and its [methodology](#).

Most Americans Point to Circumstances, Not Work Ethic, for Why People Are Rich or Poor

Young people have more negative views of impact of billionaires

On the fundamental question of why some people are rich and others are poor, more Americans point to the advantages they possess – or the obstacles they face – rather than their work ethic. Nearly two-thirds of U.S. adults (65%) say the main reason some people are rich is because they have had more advantages in life than most other people; far fewer say it is because they have worked harder than others (33%).

An even larger majority (71%) says people are poor because they have faced more obstacles in life. Only about a quarter (26%) say they are poor because they have not worked as hard.

As in the past, these views are deeply divided along partisan lines, according to a new survey by Pew Research Center, conducted Jan. 6-19 among 12,638 U.S. adults who are members of the Center’s American Trends Panel. Large majorities of Democrats and Democratic-leaning independents say advantages in life have more to do with why someone is rich (82%) and that having faced more obstacles has more to do with why someone is poor (86%).

A majority of Americans say people are rich because they have had more ‘advantages in life’; fewer say it’s because they have worked harder than others

In your opinion, which generally has more to do with ... (%)

Note: No answer responses not shown.

Source: Survey of U.S. adults conducted Jan. 6-19, 2020.

PEW RESEARCH CENTER

Opinions among Republicans and Republican leaners are more divided: 53% say hard work has more to do with why a person is rich, while 45% say it is because they have more advantages. In views of why a person is poor, 55% of Republicans say it is more because they have faced obstacles most others have not, while 42% say it is more because they have not worked as hard as most others.

Views of reasons why people are rich, 2014-2020

Views of why people are rich have changed significantly over the past few years, with a growing share of Americans saying the main reason a person is rich is because they possess more advantages than other people.

In a separate telephone survey also conducted in January, the share saying the main reason a person is rich is because they have more advantages than others has increased 13 percentage points since 2018, while there has been a comparable decline (12 points) in the share attributing a person's wealth more to hard work. These changes are evident among both Republicans and Democrats.

Since 2018, Republicans and Democrats have become more likely to say a person is rich because they have more advantages than others

Which generally has more to do with why a person is rich? (%)

- They have had more advantages in life than most other people
- They have worked harder than most other people

PEW RESEARCH CENTER

It is important to note that there are mode differences between the telephone and online surveys. The differences are more pronounced among Republicans than Democrats. Comparing the January telephone and panel surveys among Republicans, similar shares say that rich people are wealthy more because “they have worked harder than most other people.” However, there is a 16 percentage point difference in the shares who attribute being rich to having “had more advantages in life” (29% on the phone, 45% online). One reason for this difference is that a sizable share of Republicans volunteer “both” (14%) or “don’t know” (4%) as a response on the telephone, while these types of volunteered responses are not possible online (a small share – 2% – skip the question online).

Democrats offer similar views on this question, regardless of survey mode. Roughly eight-in-ten say people are rich because they have had more advantages in life, though that is the highest share offering this response since the question was first asked in 2014. For more on survey mode differences, see [*“Trends are a cornerstone of public opinion research. How do we maintain them when there’s a shift in survey mode?”*](#)

Views of the impact of billionaires on the country

When asked about the impact of billionaires on the country, a majority (58%) say it is neither bad nor good, [according to the January survey](#).

Nearly a quarter (23%) say the fact that some people have personal fortunes of a billion dollars or more is a bad thing, while slightly fewer (19%) see this as a good thing.

Republicans and Democrats differ over the impact of billionaires. While a majority of Republicans (62%) say having billionaires in this country is neither bad nor good, more view this positively (28%) than negatively (9%).

By contrast, more Democrats say the fact that some people have fortunes of a billion dollars or more is bad (34%) than good (12%); 53% say it is neither bad nor good.

Liberal Democrats, in particular, have a negative view about billionaires. Nearly half (48%) say they are a bad thing for the country, roughly twice the share of conservative and moderate Democrats (23%) who say this.

Young adults, liberal Democrats are more likely than others to say billionaires are a 'bad thing' for the U.S.

Do you think the fact that there are some people in this country who have personal fortunes of a billion dollars or more is ... (%)

Note: No answer responses not shown.

Source: Survey of U.S. adults conducted Jan. 6-19, 2020.

PEW RESEARCH CENTER

Young adults are more likely than older people to say that billionaires are a bad thing. Nearly four-in-ten adults under age 30 (39%) say the fact that some have fortunes of a billion dollar or more is a bad thing; that compares with 24% of those ages 30 to 49 and just 15% of those 50 and older.

In both parties, those under age 30 are more likely than older people to express negative views of how billionaires affect the country. Still, while half of young Democrats say billionaires are a bad thing, just 22% of 18 to 29-year-old Republicans agree.

Among the public, there are only modest differences by family income in views of the impact of billionaires. Among Republicans, however, 37% with family incomes of \$150,000 or more say the fact that there are billionaires is a good thing, while a substantially smaller share of Republicans with incomes of less than \$30,000 (23%) say the same.

Half of under-30 Democrats say billionaires are bad for the country

% who say it's a bad thing that some people in the U.S. have personal fortunes of a billion dollars or more

Note: No answer responses not shown.

Methodology

The American Trends Panel survey methodology

The American Trends Panel (ATP), created by Pew Research Center, is a nationally representative panel of randomly selected U.S. adults. Panelists participate via self-administered web surveys. Panelists who do not have internet access at home are provided with a tablet and wireless internet connection. The panel is being managed by Ipsos.

Data in this report are drawn from the panel wave conducted January 6 to January 19, 2020. A total of 12,638 panelists responded out of 15,463 who were sampled, for a response rate of 82%.

This does not include nine panelists who were removed from the data due to extremely high rates of refusal or straightlining. The cumulative response rate accounting for nonresponse to the recruitment surveys and attrition is 5.3%. The break-off rate among panelists who logged onto the survey and completed at least one item is 1%. The margin of sampling error for the full sample of 12,638 respondents is plus or minus 1.3 percentage points.

American Trends Panel recruitment surveys

Recruitment dates	Mode	Invited	Joined	Active panelists remaining
Jan. 23 to March 16, 2014	Landline/ cell RDD	9,809	5,338	2,315
Aug. 27 to Oct. 4, 2015	Landline/ cell RDD	6,004	2,976	1,337
April 25 to June 4, 2017	Landline/ cell RDD	3,905	1,628	685
Aug. 8 to Oct. 31, 2018	ABS/web	9,396	8,778	6,421
Aug. 19 to Nov. 30, 2019	ABS/web	5,900	4,720	4,705
	Total	35,014	23,440	15,463

Note: Approximately once per year, panelists who have not participated in multiple consecutive waves or who did not complete an annual profiling survey are removed from the panel. Panelists also become inactive if they ask to be removed from the panel.

PEW RESEARCH CENTER

The ATP was created in 2014, with the first cohort of panelists invited to join the panel at the end of a large, national, landline and cellphone random-digit-dial survey that was conducted in both English and Spanish. Two additional recruitments were conducted using the same method in 2015 and 2017, respectively. Across these three surveys, a total of 19,718 adults were invited to join the ATP, of which 9,942 agreed to participate.

In August 2018, the ATP switched from telephone to address-based recruitment. Invitations were sent to a random, address-based sample (ABS) of households selected from the U.S. Postal Service's Delivery Sequence File. In each household, the adult with the next birthday was asked to go online to complete a survey, at the end of which they were invited to join the panel. For a

random half-sample of invitations, households without internet access were instructed to return a postcard. These households were contacted by telephone and sent a tablet if they agreed to participate. A total of 9,396 were invited to join the panel, and 8,778 agreed to join the panel and completed an initial profile survey. The same recruitment procedure was carried out on August 19, 2019, from which a total of 5,900 were invited to join the panel and 4,720 agreed to join the panel and completed an initial profile survey. Of the 23,440 individuals who have ever joined the ATP, 15,463 remained active panelists and continued to receive survey invitations at the time this survey was conducted.

The U.S. Postal Service's Delivery Sequence File has been estimated to cover as much as 98% of the population, although some studies suggest that the coverage could be in the low 90% range.¹

¹ AAPOR Task Force on Address-based Sampling. 2016. "[AAPOR Report: Address-based Sampling](#)."

Weighting

The ATP data were weighted in a multistep process that begins with a base weight incorporating the respondents' original selection probability. The next step in the weighting uses an iterative technique that aligns the sample to population benchmarks on the dimensions listed in the accompanying table.

Sampling errors and tests of statistical significance take into account the effect of weighting. Interviews are conducted in both English and Spanish.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

Weighting dimensions

Variable	Benchmark source
Gender	2018 American Community Survey
Age	
Education	
Race/Hispanic origin	2019 CPS March Metropolitan status Supplement
Country of birth among Hispanics	
Home internet access	
Volunteerism	2017 CPS Volunteering & Civic Life Supplement
Voter registration	2018 CPS Voting and Registration Supplement
Party affiliation	Average of the three most recent Pew Research Center telephone surveys.

Note: Estimates from the ACS are based on non-institutionalized adults. Voter registration is calculated using procedures from Hur, Achen (2013) and rescaled to include the total US adult population.

PEW RESEARCH CENTER

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey:

Survey conducted January 6-19, 2020

Group	Unweighted sample size	Weighted %	Plus or minus ...
Total sample	12,638		1.3 percentage points
Rep/Lean Rep	5,221	44	2.0 percentage points
Dem/Lean Dem	7,013	51	1.8 percentage points

Sample sizes and sampling errors for other subgroups are available upon request.
