

# Topline questionnaire

**International Science Survey 2019-2020**

**September 29, 2020 Release**

Methodological notes:

- Survey results are based on national samples. For further details on sample designs, see Methodology section and our international survey methods [database](#).
- Due to rounding, percentages may not total 100%. The topline “total” columns show 100%, because they are based on unrounded numbers.
- Not all questions included in the International Science Survey 2019-2020 are presented in this topline. Omitted questions have either been previously released or will be released in future reports.

A similar question was asked on World Value Surveys and the Asian Barometer, although these surveys sometimes used different modes of contacting respondents. The World Value Surveys asked: "Here are two statements people sometimes make when discussing the environment and economic growth. Which of them comes closer to your own point of view?" The Asian Barometer asked: "There are two statements: (1) Protecting the environment should be given priority, even if it causes slower economic growth and some loss of jobs; and (2) Creating jobs should be the top priority, even if the environment suffers to some extent. Which of these statements comes closer to your view?"
