How we did this

This Pew Research Center analysis focuses on public opinion of China in 35 countries across the Asia-Pacific region, Europe, Latin America, the Middle East-North Africa region, North America and sub-Saharan Africa. Views of China are examined in the context of long-term trend data.

Countries included in this report

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

For non-U.S. data, this analysis draws on nationally representative surveys of 40,566 adults conducted from Jan. 5 to May 21, 2024. All surveys were conducted over the phone with adults in Canada, France, Germany, Greece, Italy, Japan, Malaysia, the Netherlands, Singapore, South Korea, Spain, Sweden and the United Kingdom. Surveys were conducted face-to-face in Argentina, Bangladesh, Brazil, Chile, Colombia, Ghana, Hungary, India, Israel, Kenya, Mexico, Nigeria, Peru, the Philippines, Poland, South Africa, Sri Lanka, Thailand, Tunisia and Turkey. In Australia, we used a mixed-mode probability-based online panel.

In the United States, we surveyed 3,600 adults from April 1 to April 7, 2024. Everyone who took part in this survey is a member of the Center's American Trends Panel (ATP), an online survey

panel that is recruited through national, random sampling of residential addresses. This way nearly all U.S. adults have a chance of selection. The survey is weighted to be representative of the U.S. adult population by gender, race, ethnicity, partisan affiliation, education and other categories. Read more about the [ATP's methodology](#).

Throughout the report, we analyze respondents' attitudes based on where they place themselves on an ideological scale. We asked about political ideology using several slightly different scales and categorized people as being on the ideological left, center or right.

- In most countries, we asked people to place themselves on a scale ranging from “Extreme left” to “Extreme right.” The question was asked this way in Argentina, Bangladesh, Brazil, Canada, Chile, Colombia, France, Germany, Greece, Hungary, Israel, Italy, Mexico, the Netherlands, Nigeria, Peru, the Philippines, Poland, South Africa, Spain, Sweden, Turkey and the United Kingdom.
- In Australia, the scale ranged from “Left” to “Right.”
- In Japan, Singapore, South Korea and Thailand, ideology was measured on a scale from “Extremely progressive” to “Extremely conservative.”
- In the U.S., ideology is defined as conservative (right), moderate (center) and liberal (left).
- Ideology was not asked about in Ghana, India, Kenya, Malaysia, Sri Lanka or Tunisia.

Prior to 2024, combined totals were based on rounded topline figures. For all reports beginning in 2024, totals are based on unrounded topline figures, so combined totals might be different than in previous years. Refer to the 2024 topline to see our new rounding procedures applied to past years' data.

Here are the [questions](#) used for the report, along with responses, and the [survey methodology](#).

Most People in 35 Countries Say China Has a Large Impact on Their National Economy

People in middle-income countries are more likely than those in high-income countries to view China's economic influence positively

People around the world feel China's economic influence where they live, according to a new Pew Research Center survey of 35 countries.

Large majorities in nearly all the nations we polled – spanning six continents and ranging in income level – say China has a great deal or a fair amount of influence on their country's economic conditions.

And China's economic influence is now felt more widely than it was when we last asked this question in 2019. **In 10 of the 13 countries where trend data is available, a larger share say China has a great deal of impact on their country's economy than said so five years ago.**

But whether people see this influence as positive or negative varies widely. **In most of the middle-income countries included in the survey, people tend to view China's economic influence as a good thing. But in the high-income countries, people tend to see it as a bad thing.**

- In the 17 middle-income countries surveyed, a median of 47% of adults say China has a *positive* influence on their country's economy, while 29% say it has a negative impact.
- In the 18 high-income countries surveyed, a median of 57% of adults say China's economic influence is *negative*, while 28% say it's positive.

More in middle-income countries than high-income countries see China's economic influence as positive

Median % who say China is having a ___ impact on economic conditions in their country

Note: Percentages are medians based on 18 high-income countries and 17 middle-income countries. Reflects responses to two questions: one asking about how much influence China has on economic conditions and another on whether that influence is positive or negative. Those who said China is having no influence at all, who volunteered another answer like "Both" or "Neither," or who did not answer are not shown.

PEW RESEARCH CENTER

Economic categorization

For this report, we grouped countries into high-income and middle-income categories based on [definitions from the World Bank](#).

Countries included in this report by economic category

Source: Pew Research Center analysis of World Bank data.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

Americans are the most likely to have negative views of China's economic impact. About three-quarters say China's influence on the U.S. economy is negative. (*Read more about [Americans' views of China](#) in our May report.*)

Where views on China's economic influence have changed, they have generally become more negative. In Argentina, Brazil, Israel, Japan, South Korea and Tunisia, more say China has a *negative* economic influence on their country than said so in 2019. (*Read more about perceptions of China's economic impact in [Chapter 2](#).*)

Overall favorability of China follows a similar pattern to views of its economic influence:

- Across the high-income countries surveyed, a median of 70% view China unfavorably.
- Across the middle-income countries surveyed, a median of 56% view China favorably. (Read more about favorability in [Chapter 1](#).)

These are among the key findings of a new survey of 44,166 people in 35 countries conducted from Jan. 5 to May 21, 2024.

The report also includes some questions only asked in the Asia-Pacific region or in specific middle-income countries.

China's overall favorability is higher in middle-income countries

Median % who have a(n) ___ opinion of China

Note: Percentages are medians based on 18 high-income countries and 17 middle-income countries.

Source: Spring 2024 Global Attitudes Survey.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

Views of Chinese firms are mixed

China launched its [Belt and Road Initiative](#) in 2013. Today, more than 10 years into the initiative, the country's global outward foreign direct investment is [close to \\$3 trillion](#). And according to a [Bloomberg analysis](#) of data from China's Ministry of Commerce, its investments overseas are at their highest point in the last eight years.

At the same time, controversies have arisen about the [environmental impact](#) of Chinese firms operating abroad, [how their workers are treated](#), and even whether Chinese investments benefit local economies or [act as harmful competition](#).

Still, people in a number of middle-income nations have a positive impression of Chinese

companies operating there. **Across the nine nations where we asked about this, a 72% median say Chinese companies are good for their country's economy.** Views are most positive in Thailand (81%), Kenya (80%) and Bangladesh (79%), though a majority or plurality hold this view in each of the nine surveyed countries.

When it comes to whether Chinese companies work to protect the environment in these countries, opinion is a bit cooler. **A median of 63% say Chinese companies *do* work to protect the environment. But in Ghana and South Africa, large shares say they do not.**

People in select middle-income countries have mostly positive views of Chinese companies operating there

*% who say each statement describes Chinese companies operating in their country **very/somewhat well***

Source: Spring 2024 Global Attitudes Survey.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

Opinion is even more mixed on whether Chinese companies in each country treat local workers fairly. **In Ghana, Nigeria, the Philippines and South Africa, around four-in-ten or more *do not* think Chinese companies operating in their country treat local workers fairly.** (Read more about views of Chinese firms in [Chapter 2](#).)

China's territorial disputes concern many in Asia-Pacific countries

China is party to multiple territorial disputes in the Asia-Pacific region, whether related to the [South China Sea](#), the [East China Sea](#) or even specific borders such as [those between China and India](#). **Of the 10 Asia-Pacific countries we surveyed, majorities or pluralities in all but Thailand are at least somewhat concerned about these territorial disputes.**

In the Philippines, for example, where border tensions with China largely center on the [Second Thomas Shoal of the Spratly Islands](#), 91% say they are concerned about territorial disputes between China and its neighbors, including 65% who are *very* concerned. (Since fielding, the conflict has flared up over [a collision in the area](#) between Chinese and Philippine ships.)

Publics in Asia-Pacific countries are concerned about territorial disputes between China and its neighbors

% who are **concerned** about territorial disputes between China and neighboring countries

Source: Spring 2024 Global Attitudes Survey.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

Around three-quarters or more in Australia, Japan, Malaysia and South Korea also express concern. (*Read more about views of China’s territorial disputes in [Chapter 3.](#)*)

In the Asia-Pacific, views differ on whether China contributes to global peace and stability

Across the Asia-Pacific region, we also asked people whether China contributes to peace and stability around the world. Opinion is divided: In Malaysia and Thailand, around two-thirds or more see it playing this role. About three-in-ten or fewer say the same in Australia, India, Japan and South Korea.

When we [asked this question in 24 countries in 2023](#), Australians, Japanese and South Koreans were some of the least likely to say China contributes to global peace and stability. They remain some of the most critical, but to a lesser extent than last year. Still, these three publics are generally less likely to say China plays this stabilizing role than to say the same about other regional powers we asked about (Australia, India and Japan).

PEW RESEARCH CENTER

1. Views of China and Xi Jinping

Across the 35 countries we surveyed, more have unfavorable views of China than favorable ones. The same is true when it comes to Chinese President Xi Jinping: People mostly lack confidence in him to do the right thing regarding world affairs.

But opinions vary widely across regions and across levels of economic development. For example, in the high-income European countries included in the survey, views of China and Xi tend to be broadly negative, while in [middle-income nations](#) in sub-Saharan Africa, views are significantly more positive.

Views tend to be among the most *and* least positive in the Asia-Pacific region – more positive in middle-income countries like Malaysia and Thailand, and more negative in high-income ones like Australia, Japan and South Korea.

Overall favorability of China

A 35-country median of 35% have a favorable view of China, compared with a median of 52% who have a negative view. Opinions vary widely, from 11% favorable in Sweden to 80% favorable in Thailand.

In the 18 high-income countries we polled, views of China are, on balance, negative. There are three notable exceptions where opinion of China is either divided or net positive: Chile, Greece and Singapore. Among Singaporeans, those who are ethnically Chinese are particularly favorable (71%). A majority of Singaporeans who are not ethnically Chinese also see China favorably (59%).

In the 17 middle-income countries we polled, views of China are much rosier. Though three countries stand out for having more negative than positive views: India, the Philippines and Turkey.

Attitudes toward China vary widely across regions

% who have a(n) ___ opinion of China

Source: Spring 2024 Global Attitudes Survey.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

Views of China over time

Views of China have turned slightly more positive since last year in Argentina, Canada and Greece (+7 percentage points each).

Over the same period, favorable views have decreased significantly in Israel (-15) and Hungary (-7).

The sharp decrease in favorability among Israelis follows a number of Chinese policy positions related to the Israel-Hamas war. China was an [early proponent of a cease-fire in Gaza](#), and Chinese Foreign Minister Wang Yi [accused Israel](#) of going “beyond the scope of self-defense” in the first days of the war. (The survey predated Xi’s calls for the establishment of an independent Palestinian state in his [May meetings with Arab leaders](#).)

Jewish Israelis (25%) have much less favorable views of China than Arab Israelis do (61%). Among Jewish Israelis, this reflects an 18-point decrease in favorability since last year; among Arab Israelis, the decrease was 7 points.

In Hungary, the survey followed China’s [offer for a security pact](#) between the two countries but occurred before [Xi’s May visit to Budapest](#).

Views of China are shifting in many countries

% who have a *favorable* opinion of China

Note: Only statistically significant changes are shown.
 Source: Spring 2024 Global Attitudes Survey.
 “Most People in 35 Countries Say China Has a Large Impact on Their National Economy”

PEW RESEARCH CENTER

We also see significant shifts in opinion in some of the countries not surveyed since before the outbreak of the COVID-19 pandemic:

- In the Philippines and Turkey, favorable views have fallen 6 and 11 percentage points, respectively, since 2019.
- In Chile, they've fallen 8 points since 2017.
- In Colombia, they've increased 12 points since 2017.

In Ghana, the share who are unsure or decline to answer the question has dropped significantly since 2017, and in turn, both positive (+11) and negative (+7) views of China have increased. The same has also happened in Tunisia since 2019: Positive views have increased 5 points (from 63% to 68%) and negative views have increased 9 points (from 16% to 25%) while the share who decline to answer decreased significantly.

Views by age

Younger people tend to have more favorable opinions of China than older people do. This has [long been the case in the United States](#), and is also true in over half of the other countries surveyed.

Gaps are particularly large in Brazil, Chile, Mexico, Peru and the United Kingdom, where those ages 18 to 34 are around 25 points more likely than those 50 and older to view China positively.

Only in Hungary and South Korea is the pattern reversed, with younger people feeling *less* favorably toward China.

Views by ideology

In most countries, views of China are not an ideological issue. But, in the U.S. and Israel, those who place themselves on the left of the ideological spectrum (“liberals” in the U.S.) have more favorable views than those on the right (“conservatives” in the U.S.).

In Bangladesh, Hungary, the Netherlands and Spain, those

In most countries, younger people have more positive views of China

% who have a *favorable* opinion of China, by age

Note: Only statistically significant differences are shown.
 Source: Spring 2024 Global Attitudes Survey.
 “Most People in 35 Countries Say China Has a Large Impact on Their National Economy”

on the right tend to have more positive views on China than those on the left.

Confidence in Xi

Few internationally have confidence in Chinese President Xi Jinping. A 35-country median of 24% express at least a fair amount of confidence in the leader, while 62% have little to no confidence. However, opinion varies widely across high- and middle-income countries (49% and 12% confidence at the median, respectively), as well as across regions.

Views are least positive in North America and Europe: Clear majorities in each country surveyed there have little or no confidence in Xi.

In the Asia-Pacific region, Xi gets some of his highest and lowest ratings.

Positive ratings tend to be more common in middle-income countries than high-income countries. For example, roughly half or more in Bangladesh, Malaysia, and Thailand have at least a fair amount of confidence in Xi.

Conversely, in Australia, Japan and South Korea, at least eight-in-ten lack confidence in him. Middle-income India, where more *lack* confidence in Xi, and

Mixed views of Xi across 35 countries

% who have ___ (of) confidence in Chinese President Xi Jinping to do the right thing regarding world affairs

Note: In Australia and the U.S., "Don't know/Refused" includes those who chose an explicit "Never heard of this person" response option.

Source: Spring 2024 Global Attitudes Survey.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

high-income Singapore, where most *have* confidence in Xi, are two notable exceptions to this pattern.

Views of Xi are more positive than negative in sub-Saharan Africa, especially in Kenya (64% vs. 33%) and Nigeria (59% vs. 30%). Notably, large shares in South Africa (33%) and Ghana (21%) refuse to answer or are unsure.

In the Middle East-North Africa region, views of Xi lean positive in Tunisia, but much smaller shares have confidence in him in Israel and Turkey. In Latin America, only around three-in-ten or fewer have confidence in Xi in every country surveyed.

Views of Xi over time

Among countries last surveyed in 2023, opinions of the Chinese leader have become slightly less positive in South Africa (-9) and Israel (-6) and slightly more positive in Argentina (+6) and Hungary (+7).

Confidence has also fallen slightly in two countries last surveyed in 2022: Malaysia (-7) and Singapore (-6).

And, in the Philippines, last surveyed in 2019, confidence has fallen 13 points, from 58% to 45%.

2. Views of China's influence on domestic economic conditions

While most adults in the 35 countries we surveyed feel China's influence on domestic economic conditions, people are divided on whether that influence is positive or negative. Those in high-income countries tend to see China's economic influence negatively, while those in [middle-income countries](#) have a more positive outlook.

We also asked specifically about the influence of Chinese companies operating abroad in nine middle-income countries in Africa and Asia. In these nine nations, people largely see Chinese companies as beneficial to their economy. Views are slightly more mixed when it comes to whether these companies take measures to protect the environment and treat local workers well.

How much influence do people think China has on their country's economy?

Two-thirds or more in all 35 countries surveyed see China influencing domestic economic conditions. **This includes shares ranging from 13% to 62% who say China has a great deal of influence on economic conditions in their country.**

Nearly all adults in the U.S. and Canada agree China has some amount of influence on their country's economic conditions. About three-in-ten in each country see *a great deal* of influence. (For more on [U.S. views of China's economic impact](#), read our [May report](#).)

In Europe, nine-in-ten or more in most countries surveyed say China influences economic conditions there. Those in France, Germany and Italy are particularly likely to say China has *a great deal* of influence.

China's effect on economic conditions is felt less evenly in the 10 Asian-Pacific countries surveyed. It is most keenly felt

Majorities see a lot of influence from China on their country's economic conditions

% who say China is having ___ (of) influence on economic conditions in their country

Note: Those who did not answer are not shown.

Source: Spring 2024 Global Attitudes Survey.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

in Japan, Malaysia and South Korea, where roughly half say China has a *great deal* of influence.

About eight-in-ten or more in Israel and Turkey say China influences their country’s economic conditions. Tunisians stand out from the other two Middle East-North African publics surveyed: They are the most likely to say China has no influence *at all* on economic conditions (22%) but also the most likely to say it has a great deal of influence (41%).

Of those surveyed in sub-Saharan Africa, Kenyans see the greatest influence from China. About nine-in-ten Kenyans say China influences their domestic economy, including 50% who say it has a great deal of influence. A similar share of Nigerians say China influences their country’s economic conditions, but a smaller share says there is a great deal of influence (41%).

Eight-in-ten or more in each of the six Latin American countries surveyed say China has some amount of influence on their country’s economic conditions. Chileans see the most substantial impact, with 60% reporting a great deal of influence.

Views by ideology

In Australia, Italy, Spain and the U.S., those who place themselves on the ideological right see more influence from China than those on the left do. For example, in Australia, 47% of those on the right say China influences the Australian economy a great deal, while 25% on the left agree. In Spain, those on the right are also more likely to answer the question.

The opposite is true in Japan and South Korea, where those on the *left* are more likely to say China is having a great deal of influence on their country’s economic conditions.

Views by age

In Australia, Canada, Germany and the U.S., those ages 50 and older are more likely than adults under 35 to say China has a great deal of

PEW RESEARCH CENTER

influence on their country's economic conditions. Older people are also more likely to answer the question in Australia.

In Israel, conversely, it's *younger adults* who are more likely to say that China has a great deal of influence. The same is true in India, South Africa and Sri Lanka, though older adults are also more likely to answer the question in these countries.

Views over time

We've asked about China's influence on domestic economic conditions before in 15 of the 35 countries surveyed this year. **The sense that China has a great deal of economic influence has increased significantly in 11 of these trended countries.**

Some countries were last asked the question in 2019. Of this group, Brazil has seen the greatest change. The share of Brazilian adults who think China has a great deal of influence on their economy has almost doubled, from 26% in 2019 to 51% in 2024. Double-digit increases are also seen in Argentina, India, Kenya, Mexico, Tunisia and Turkey since 2019.

Of the two countries where the question was last asked in 2013, a significant change occurred in Chile. Eleven years ago, 29% of Chileans said China exerts a great deal of economic influence in their country, compared with 60% today.

PEW RESEARCH CENTER

Do people think China’s economic influence is positive or negative?

Those who said China is having some amount of influence on economic conditions were also asked to evaluate whether that influence is positive or negative – with mixed results.

Americans are the most likely to have negative views of China’s economic impact in their country.

Roughly three-quarters say China’s impact on the U.S. economy is negative.

About two-thirds in seven other countries say China has a negative effect on their economy.

Positive views of China’s impact on economic conditions dominate in 14 countries. Two-thirds hold this view in Malaysia and Singapore, including 40% in Malaysia and 30% in Singapore who say China has a *great deal of positive influence* on their country’s economic conditions.

At least six-in-ten in Mexico, Nigeria, Peru and Thailand also

China’s economic impact receives mixed reviews

Source: Spring 2024 Global Attitudes Survey.

“Most People in 35 Countries Say China Has a Large Impact on Their National Economy”

say China's impact on their economy has been positive.

In five countries, there is no consensus on whether China's economic impact is good or bad. People in Argentina, Ghana, Greece, Hungary and Israel are about as likely to say China has a positive influence as they are to say it has a negative influence.

Views by age

Younger adults see China's economic influence more positively in 10 countries.

Japan, where people have a generally negative view of China's influence, sees the greatest difference. Among Japanese adults ages 18 to 34, 38% say China has a positive impact on economic conditions in their country, compared with 13% of those 50 and older.

Even countries where positive views dominate have age differences. For example, in Singapore, where two-thirds see China's economic impact positively, younger adults are still 11 percentage points more likely than older adults to say this.

Views by ideology

In six countries, ideology is related to how *negatively* people see China’s economic impact. For Israelis, who are generally divided on whether China’s influence is positive or negative, a larger share of those on the right than those on the left or in the center see it negatively (42% vs. 23% each). Likewise, in Australia, France and the U.S., where most see China’s impact as negative, those on the right are more likely to say this than those on the left.

The opposite is true in Greece and Hungary. In both countries, evaluations of China’s impact are mixed overall, but those on the *left* are more likely to see China’s economic impact as negative. The difference is especially pronounced in Hungary, where left-leaners are roughly twice as likely as right-leaners to hold this view.

Views of China’s impact on economic conditions differ by ideology

“Most People in 35 Countries Say China Has a Large Impact on Their National Economy”

PEW RESEARCH CENTER

Views of Chinese firms operating abroad

In nine middle-income countries in the Asia-Pacific region and sub-Saharan Africa, we asked people to think more specifically about Chinese companies operating in their country. They were asked to evaluate Chinese companies along three dimensions: their effects on the domestic economy, treatment of local workers and efforts to protect the environment.

Feedback on Chinese companies is relatively positive on all three factors, especially in the Asia-Pacific countries. Still, more see Chinese firms as good for their economy than think they treat workers fairly or protect the environment.

Chinese companies and the economy

A median of 72% across the nine countries say Chinese companies operating there benefit the domestic economy.

Across the Asia-Pacific countries surveyed, those in Bangladesh and Thailand are most praiseful of Chinese companies' economic impact. About eight-in-ten in each country say the statement "They are good for the economy" describes Chinese companies somewhat or very well.

Indians are the least likely to see economic benefits from Chinese firms or to offer an opinion (20% don't know or decline to answer).

Majorities in all four African countries surveyed say Chinese

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

companies are good for their economy. In Kenya and Nigeria, around seven-in-ten or more hold this view.

Chinese companies and the environment

A nine-country median of 63% say Chinese companies work to protect the environment.

People are most likely to say this in the Asia-Pacific countries surveyed. Of these five countries, people in Bangladesh offer Chinese companies the most credit on environmental protection. About two-thirds in Sri Lanka and Thailand also say these companies work to protect the environment.

Indians again are the least likely in the region to give Chinese companies positive marks, with 43% saying they work to protect the environment. Around two-in-ten Indians offer no opinion.

Views are more divided across the African countries surveyed. The share saying the statement “They work to protect the environment” describes Chinese companies operating in their country somewhat or very well ranges from 75% in Kenya to 23% in Ghana.

In most middle-income countries surveyed, people say Chinese companies work to protect the environment

PEW RESEARCH CENTER

Chinese companies and local workers

A 57% median across the nine countries say the statement “They treat local workers fairly” describes Chinese companies operating there somewhat or very well. Still, substantial shares of the public in several nations express concern about the way local workers are treated.

Overall, those in the Asia-Pacific countries surveyed tend to say Chinese companies operating there treat local workers fairly. In Bangladesh and Thailand, about three-quarters hold this view.

In India, about half think Chinese companies treat local workers fairly, while about a quarter disagree. Another 24% do not offer an opinion.

Views are somewhat more critical in the African countries surveyed. While 68% of Kenyans say Chinese companies operating in their country treat local workers fairly, no more than about half in Ghana, Nigeria and South Africa agree. In fact, Ghanaians are more likely to think that Chinese companies *do not* treat local workers fairly (53% vs. 34%).

Views by perceptions of the economy

In most of the countries where we asked this question, positive evaluations of how the domestic economy is doing are tied to more positive views of Chinese companies. In South Africa, for example, those who [think the current economic situation in the country is good](#) are 18 points more likely than those who think it’s bad to say Chinese companies work to protect the environment.

In African countries surveyed, people are divided on whether Chinese companies treat local workers fairly

% who say the statement “*They treat local workers fairly*” describes Chinese companies operating in their country ...

They are also 16 points more likely to think Chinese companies treat local workers well and 12 points more likely to think these companies are good for their economy.

3. How people in the Asia-Pacific region view China's role on the world stage

As the largest economy and military in the Asia-Pacific region, and the second-largest population in the world, China is an important regional and global player. To learn more about views of its impact in the region and more broadly, we asked adults in 10 Asia-Pacific countries the following questions:

- “How concerned are you, if at all, about territorial disputes between China and neighboring countries?”
- “In general, to what extent do you think China contributes to peace and stability around the world?”

A 10-country median of 72% are concerned about territorial disputes, while 61% say China generally contributes to global peace and stability. However, opinions both across and within countries are mixed.

Concerns about China's territorial disputes with its neighbors

There are concerns across the Asia-Pacific region about China's territorial disputes with neighboring countries.

In the Philippines, 91% are concerned – the highest share of the 10 countries where we asked about this – including 65% who say they are *very* concerned. The survey was conducted during early 2024, which saw developments in the country's dispute with China [over territory in the Spratly Islands](#), a conflict that dates back to the 1970s. (Since fielding, the conflict has flared up over [a collision in the area](#) between Chinese and Philippine ships.)

More than eight-in-ten in Australia, Japan and South Korea share concerns about China's territorial disputes with its neighbors.

In India – where there is a [long-standing border dispute](#) with China over parts of the Himalayan region – 69% of adults are concerned, including 44% who are very concerned.

Thai adults stand out for their *lack* of concern: 61% are not worried about territorial disputes between China and neighboring countries.

Majorities in many Asia-Pacific countries surveyed are concerned about China's territorial disputes

% who are ___ about China's territorial disputes with neighboring countries

Note: In Australia, "Don't know/Refused" includes those who chose an explicit "Not sure" response option.

Source: Spring 2024 Global Attitudes Survey.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

Americans, for their part, are also concerned about China's disputes in the region. About six-in-ten U.S. adults say they are very or somewhat concerned, an opinion [especially common among older adults and conservative Republicans](#).

Views over time

In India, Japan, the Philippines and South Korea, we fielded this question in 2015 as well. In each country, majorities were concerned then and remain so now. Concern is up 9 percentage points in South Korea and 7 points in India. In Japan and the Philippines, there was no significant change in the overall shares who express concern between 2015 and 2024, though in the Philippines, the share who are *very* concerned increased 9 points over this period.

Evaluations of China’s contributions to global peace and stability

A median of 61% across the 10 Asia-Pacific countries surveyed say China contributes to global peace and stability a great deal or a fair amount. A 33% median say China does not make such contributions much or at all.

Evaluations on this measure are most positive in Thailand, where 80% see China as contributing to peace and stability. Majorities throughout the Southeast Asian countries surveyed agree.

In Australia, India, Japan and South Korea – the region’s four largest economies behind China – much smaller shares say China contributes to peace and stability. Fewer than three-in-ten hold this view in each of the four countries. And in Australia and India, about four-in-ten say China does not contribute to global peace and stability *at all*.

Views over time

When we [asked this question in 24 countries in 2023](#), adults in Australia, Japan and South Korea were some of the least likely to believe China contributes to global peace and stability. Though still largely critical, ratings on this measure are up significantly from last year in those three countries.

Take Japan as an example. Following a [somewhat rare meeting](#) between the Japanese prime minister and Chinese president in November, the survey finds that 29% of Japanese adults think China contributes at least a fair amount to peace and stability around the world, up from 13% in 2023.

Ratings of China’s role on the world stage are low, but improving, in several Asia-Pacific countries

% who say China contributes to peace and stability around the world ...

Note: Those who did not answer are not shown. All differences shown are statistically significant. Trends from 2023 are only available for three countries.

Source: Spring 2024 Global Attitudes Survey.

“Most People in 35 Countries Say China Has a Large Impact on Their National Economy”

PEW RESEARCH CENTER

Views by age

In about half the Asia-Pacific countries surveyed, adults ages 18 to 34 have a better impression of China's international behavior than those ages 50 and older. The difference is largest in the Philippines, where 63% of younger adults think China contributes to global peace and stability a great deal or a fair amount, compared with 46% of Filipinos 50 and older.

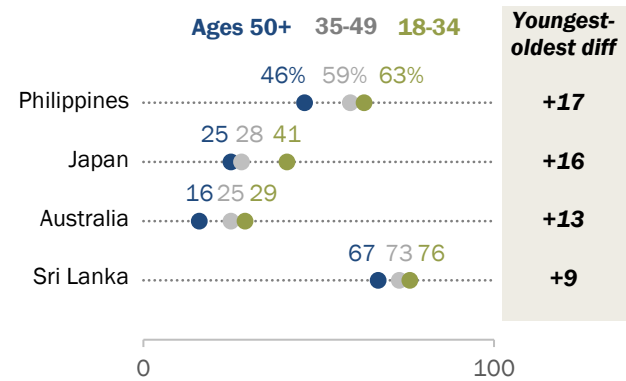

Views by perceptions of China's economic influence

Respondents' evaluations of China's influence on their own country's economy (as analyzed in [Chapter 2](#)) also impact their assessments of China's contributions to global peace and stability. Those who say China has a sizable *positive* influence on their economy generally give more favorable ratings of its contributions to global peace and stability than those who see a sizable *negative* influence.

In Bangladesh, for example, 85% of those who see a great deal or fair amount of *positive* influence on their economy say China contributes to peace and stability around the world. Meanwhile, 62% of those who see a similarly sized *negative* influence on Bangladesh's economy agree.

Younger adults more likely to say China contributes to global peace, stability

% who say China contributes to peace and stability around the world **a great deal/a fair amount**, by age

Note: Only statistically significant differences are shown.

Source: Spring 2024 Global Attitudes Survey.

"Most People in 35 Countries Say China Has a Large Impact on Their National Economy"

PEW RESEARCH CENTER

How do China's contributions to peace and stability compare with other regional powers?

In addition to asking how much China contributes to peace and stability around the world, we also asked how much Australia, India and Japan do the same.

In six of the 10 Asia-Pacific countries surveyed, majorities say China contributes to global peace and stability at least a fair amount. But in four – Australia, India, Japan and South Korea – no more than about three-in-ten hold this view. In these countries, ratings of China as a contributor to global peace and stability are the lowest of any regional power we asked about.

Japan gets the highest median rating on its contributions. Majorities in eight countries think Japan contributes to peace and stability at least a fair amount.

A median of 62% say Australia contributes to global peace and stability, similar to the medians for Japan (65%) and China (61%). Australia's highest ratings come from adults in Japan, the Philippines and Thailand, where roughly seven-in-ten hold this view.

India gets the lowest median rating on this measure (50%). Still, among Indians themselves, 89% believe their country contributes to global peace and stability. And about three-quarters in neighboring Sri Lanka agree.

Views of how China, Japan, Australia and India contribute to global peace and stability

% who say each country contributes to peace and stability around the world a great deal/a fair amount

	China	Japan	Australia	India
Thailand	80%	80%	69%	47%
Malaysia	76	72	63	46
Singapore	73	58	50	49
Sri Lanka	72	73	65	76
Bangladesh	64	59	53	60
Philippines	57	81	72	51
Japan	29	76	71	60
India	26	49	50	89
South Korea	26	35	46	30
Australia	22	58	61	37
10-country median	61	65	62	50

Methodology

About Pew Research Center's Spring 2024 Global Attitudes Survey

Results for the survey are based on telephone, face-to-face and online interviews conducted under the direction of Gallup, Langer Research Associates, Social Research Centre and Verian. The results are based on national samples, unless otherwise noted. More details about our international survey methodology and country-specific sample designs are [available here](#).

The American Trends Panel survey methodology

Overview

The American Trends Panel (ATP), created by Pew Research Center, is a nationally representative panel of randomly selected U.S. adults. Panelists participate via self-administered web surveys. Panelists who do not have internet access at home are provided with a tablet and wireless internet connection. Interviews are conducted in both English and Spanish. The panel is being managed by Ipsos.

Data in this report is drawn from ATP Wave 145, conducted from April 1-7, 2024, among a sample of ATP members who had previously completed both of ATP Waves 132 and 143. It includes an [oversample](#) of non-Hispanic Asian adults, non-Hispanic Black men and Hispanic men in order to provide more precise estimates of the opinions and experiences of these smaller demographic subgroups. These oversampled groups are weighted back to reflect their correct proportions in the population. A total of 3,600 panelists responded out of 3,776 who were sampled, for a response rate of 95%. The cumulative response rate accounting for nonresponse to the recruitment surveys and attrition is 3%. The break-off rate among panelists who logged on to the survey and completed at least one item is 1%. The margin of sampling error for the full sample of 3,600 respondents is plus or minus 2.1 percentage points.

Panel recruitment

The ATP was created in 2014, with the first cohort of panelists invited to join the panel at the end of a large, national, landline and cellphone random-digit dial survey that was conducted in both English and Spanish. Two additional recruitments were conducted using the same method in 2015 and 2017, respectively. Across these three surveys, a total of 19,718 adults were invited to join the ATP, of whom 9,942 (50%) agreed to participate.

In August 2018, the ATP switched from telephone to address-based sampling (ABS) recruitment. A study cover letter and a pre-incentive are mailed to a stratified, random sample of households

selected from the U.S. Postal Service’s Delivery Sequence File. This Postal Service file has been estimated to cover as much as 98% of the population, although some studies suggest that the coverage could be in the low 90% range.¹ Within each sampled household, the adult with the next

birthday is asked to participate. Other details of the ABS recruitment protocol have changed over time but are available upon request.²

We have recruited a national sample of U.S. adults to the ATP approximately once per year since 2014. In some years, the recruitment has included additional efforts (known as an “oversample”) to boost sample size with underrepresented groups. For example, Hispanic adults, Black adults and Asian adults were oversampled in 2019, 2022 and 2023, respectively.

Across the six address-based recruitments, a total of 23,862 adults were invited to join the ATP, of whom 20,917 agreed to join the panel and completed an initial profile survey. Of the 30,859 individuals who have ever joined the ATP, 11,906 remained active panelists and continued to receive survey invitations at the time this survey was conducted.

The American Trends Panel never uses breakout routers or chains that direct respondents to additional surveys.

American Trends Panel recruitment surveys

Recruitment dates	Mode	Invited	Joined	Active panelists remaining
Jan. 23 to March 16, 2014	Landline/ cell RDD	9,809	5,338	1,390
Aug. 27 to Oct. 4, 2015	Landline/ cell RDD	6,004	2,976	831
April 25 to June 4, 2017	Landline/ cell RDD	3,905	1,628	404
Aug. 8 to Oct. 31, 2018	ABS	9,396	8,778	3,844
Aug. 19 to Nov. 30, 2019	ABS	5,900	4,720	1,386
June 1 to July 19, 2020; Feb. 10 to March 31, 2021	ABS	3,197	2,812	1,438
May 29 to July 7, 2021; Sept. 16 to Nov. 1, 2021	ABS	1,329	1,162	731
May 24 to Sept. 29, 2022	ABS	3,354	2,869	1,449
April 17 to May 30, 2023	ABS	686	576	433
	Total	43,580	30,859	11,906

Note: RDD is random-digit dial; ABS is address-based sampling. Approximately once per year, panelists who have not participated in multiple consecutive waves or who did not complete an annual profiling survey are removed from the panel. Panelists also become inactive if they ask to be removed from the panel.

Sample design

The overall target population for this survey was noninstitutionalized persons ages 18 and older living in the U.S., including Alaska and Hawaii. It featured a stratified random sample of active ATP members who completed both ATP Wave 132 and Wave 143. Among the panelists who met these criteria, Hispanic men, non-Hispanic Black men and non-Hispanic Asian adults were selected with certainty. The remaining panelists were sampled at rates designed to ensure that the share of respondents in each stratum is proportional to its share of the U.S. adult population to the greatest extent possible. Respondent weights are adjusted to account for differential probabilities of selection as described in the Weighting section below.

Questionnaire development and testing

The questionnaire was developed by Pew Research Center in consultation with Ipsos. The web program was rigorously tested on both PC and mobile devices by the Ipsos project management team and Pew Research Center researchers. The Ipsos project management team also populated test data that was analyzed in SPSS to ensure the logic and randomizations were working as intended before launching the survey.

Incentives

All respondents were offered a post-paid incentive for their participation. Respondents could choose to receive the post-paid incentive in the form of a check or a gift code to Amazon.com or could choose to decline the incentive. Incentive amounts ranged from \$5 to \$20 depending on whether the respondent belongs to a part of the population that is harder or easier to reach. Differential incentive amounts were designed to increase panel survey participation among groups that traditionally have low survey response propensities.

Data collection protocol

The data collection field period for this survey was April 1-7, 2024. Postcard notifications were mailed to a subset of ATP panelists with a known residential address on April 1.³

Invitations were sent out in two separate launches: soft launch and full launch. Sixty panelists were included in the soft launch, which began with an initial invitation sent on April 1. The ATP panelists chosen for the initial soft launch were known responders who had completed previous

³ Postcard notifications are sent to 1) panelists who have been provided with a tablet to take ATP surveys, 2) panelists who were recruited within the last two years, and 3) panelists recruited prior to the last two years who opt to continue receiving postcard notifications.

ATP surveys within one day of receiving their invitation. All remaining English- and Spanish-speaking sampled panelists were included in the full launch and were sent an invitation on April 2.

All panelists with an email address received an email invitation and up to two email reminders if they did not respond to the survey. All ATP panelists who consented to SMS messages received an SMS invitation and up to two SMS reminders.

Invitation and reminder dates, ATP Wave 145

	Soft launch	Full launch
Initial invitation	April 1, 2024	April 2, 2024
First reminder	April 4, 2024	April 4, 2024
Final reminder	April 6, 2024	April 6, 2024

PEW RESEARCH CENTER

Data quality checks

To ensure high-quality data, the Center's researchers performed data quality checks to identify any respondents showing clear patterns of satisficing. This includes checking for whether respondents left questions blank at very high rates or always selected the first or last answer presented. As a result of this checking, one ATP respondent was removed from the survey dataset prior to weighting and analysis.

Weighting

The ATP data is weighted in a multistep process that accounts for multiple stages of sampling and nonresponse that occur at different points in the survey process. First, each panelist begins with a base weight that reflects their probability of selection for their initial recruitment survey. These weights are then rescaled and adjusted to account for changes in the design of ATP recruitment surveys from year to year. Finally, the weights are calibrated to align with the population benchmarks in the accompanying table to correct for nonresponse to recruitment surveys and panel attrition. If only a subsample of panelists was invited to participate in the wave, this weight is adjusted to account for any differential probabilities of selection.

American Trends Panel weighting dimensions

Variable	Benchmark source
Age (detailed)	2022 American Community Survey (ACS)
Age x Gender	
Education x Gender	
Education x Age	
Race/Ethnicity x Education	
Black (alone or in combination) x Hispanic	
Born inside vs. outside the U.S. among Hispanics and Asian Americans	
Years lived in the U.S.	
Census region x Metropolitan status	
Volunteerism	
Party affiliation x Voter registration	2022 CPS Voting and Registration Supplement
Party affiliation x Race/Ethnicity	2023 National Public Opinion Reference Survey (NPORS)
Frequency of internet use	
Religious affiliation	

Note: Estimates from the ACS are based on noninstitutionalized adults. Voter registration is calculated using procedures from Hur, Achen (2013) and rescaled to include the total U.S. adult population.

PEW RESEARCH CENTER

Among the panelists who completed the survey, this weight is then calibrated again to align with the population benchmarks identified in the accompanying table and trimmed at the 2nd and 98th percentiles to reduce the loss in precision stemming from variance in the weights. This trimming is performed separately among non-Hispanic Black, non-Hispanic Asian, Hispanic and all other respondents. Sampling errors and tests of statistical significance take into account the effect of weighting.

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups in the survey.

Sample sizes and margins of error, ATP Wave 145

Group	Unweighted sample size	Plus or minus ...
Total sample	3,600	2.1 percentage points
Rep/Lean Rep	1,487	1.7 percentage points
Dem/Lean Dem	1,952	1.7 percentage points

Note: This survey includes oversamples of Hispanic men, non-Hispanic Black men and non-Hispanic Asian adults respondents. Unweighted sample sizes do not account for the sample design or weighting and do not describe a group's contribution to weighted estimates. See the Sample design and Weighting sections above for details.

PEW RESEARCH CENTER

Sample sizes and sampling errors for other subgroups are available upon request. In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.

Dispositions and response rates

Final dispositions, ATP Wave 145

	AAPOR code	Total
Completed interview	1.1	3,600

PEW RESEARCH CENTER

Topline questionnaire

**Pew Research Center
Spring 2024 Global Attitudes Survey
July 9, 2024 Release**

Methodological notes:

- Survey results are based on national samples. For further details on sample designs, refer to the Methodology section and our [international survey methods database](#).
- Due to rounding, percentages may not total 100%. The topline “total” columns show 100%, because they are based on unrounded numbers.
- Prior to 2024, combined totals were based on rounded topline figures. Going forward, totals will be based on unrounded topline figures, so combined totals might be different than in previous years.
- Since 2007, Pew Research Center has used an automated process to generate toplines for its Global Attitudes surveys. As a result, numbers may differ slightly from those published prior to 2007.
- Surveys in the U.S. and Australia were conducted online. The U.S. survey was conducted on Pew Research Center’s American Trends Panel. The Australia survey was conducted on the Social Research Centre’s Life in Australia Panel. In both countries, many questions have been asked in previous surveys on the phone. Phone trends for comparison are provided in separate tables throughout the topline. The extent of the mode differences varies across questions; while there are negligible differences on some questions, others have more pronounced differences. Caution should be taken when evaluating online and phone estimates.
- Since 2020, the Italy survey has been conducted by telephone; surveys were conducted face-to-face in 2002 and 2007-2019.
- Since 2021, the Greece survey has been conducted by telephone; all prior surveys in Greece were conducted face-to-face.
- Some data from India in 2023 and Bangladesh and Thailand in 2014 is not directly comparable to the current survey due to large differences in item nonresponse (such as

when respondents say they don't know the answer to a question). The data is included in a separate table for reference, where relevant.

- For some countries, trends for certain years are omitted due to differences in sample design or population coverage. Omitted trends often reflect less representative samples than more recent surveys in the same countries. Trends that are omitted include:
 - Poland in March 2003
 - India prior to Winter 2013-2014
 - Nigeria prior to 2010
 - South Africa in 2007
 - Brazil prior to 2010
 - Bangladesh prior to 2014
 - Malaysia prior to 2022

- Not all questions included in the Spring 2024 Global Attitudes Survey are presented in this topline. Omitted questions have either been previously released or will be released in future reports.

		Q4b. Please tell me if you have a very favorable, somewhat favorable, somewhat unfavorable, or very unfavorable opinion of ...? b. China
