

Appendix: Sample sizes and margins of error

The following table shows the unweighted sample sizes and the error attributable to sampling that would be expected at the 95% level of confidence for different groups analyzed in the blog post, [“White Protestants and Catholics support Trump, but voters in other U.S. religious groups prefer Harris.”](#)

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.
