Voter Typology

DOLE FAILS WITH POPULISTS, GOP MODERATES
CLINTON UNITES DEMS, GAINS WORKING CLASS INDEPENDENTS

After two presidential debates and six weeks of the general campaign Bill Clinton's lead over Bob Dole is as large as it was in early September. The course of the race has changed little with the passing of each important campaign milestone. The only observable consequence of the debates is that the percentage of voters who say they might switch to Bob Dole is lower than it was just prior to the first debate (11% vs. 16%). The Pew voter typology, which divides the electorate by core values, finds Dole unable to forge a coalition of staunch conservatives, moderates and populists.

The unchanged standings also reflect the breadth of the Clinton coalition. The President is getting strong support from the left, right and center of his own party and has won over working class Independents who had big doubts about him as recently as a year ago.

In stark contrast, Dole has not only failed to attract Independents, but he has been unable to rally key Republican segments. His support is weak among economically squeezed populist conservatives. He has also turned off moderate economic conservatives, with whom Bill Clinton has made inroads. Dole only gets overwhelming support from Republicans who are both economically and socially conservative.

The Pew Research Center's voter classification system (typology) categorizes voters based on their political values, party affiliation, and political participation into ten groups -- four Democratic, three Independent and three Republican. In the summer of 1994 when voter support was about equally divided between Clinton (39%) and Dole (36%), and when Perot had a larger following (20%), moderate Democratic groups were not enthusiastic about the President.

---

1 The Typology is described in an appendix to this report (see pages 14-15).
But in the current survey, right-of-center Democrats give Clinton a strong vote of confidence. Fully 86% of moderate New Democrats say they would vote for Clinton if the election were being held today, as do 74% of older, socially conservative New Dealers. More liberal groups are even more enthusiastic. Nine out of ten voters among the liberal Seculars and among the disadvantaged Partisan Poor favor Clinton.

A profile of left of center groups in this election follows.

**New Democrats** (moderate on economic issues, strong environmentalists) Clinton has gained 25% points with this group since 1994. Opinions of Dole have turned sharply negative (62% unfavorable now vs. 34% in 1994). Clinton is not seen as weak on personal character. His record and presidential attributes impress this group.

**New Dealers** (older, unionist, socially conservative) Clinton's support is weakest and hostility to him strongest (23% unfavorable) here among all Democratic groups. But New Dealers have also turned against Dole (80% unfavorable, vs. 43% in 1994). The character issue dogs Clinton with this group, but he wins points on Medicare (by 57% to 5%, they prefer his position over Dole's). A key attraction for many is that Clinton sidetracked GOP Congressional efforts. New Dealers, who often defected to Ronald Reagan, are the Democratic group least satisfied with the quality of the presidential candidates this year. One in three (30%) would prefer a GOP Congress if Clinton is re-elected.

**Seculars** (tolerant, progressive, low religious practice) These affluent liberals are most likely to cite party (perhaps a surrogate for ideology) as their main reason for backing Clinton. Worried that health care, education and other social issues are being overlooked, Seculars prefer Clinton over Dole on Medicare by a margin of 65% to 4%. Three-quarters (74%) think Dole's tax cut would be the wrong thing for the country. The group is most likely to express anti-incumbent sentiment in the race for Congress.

</table>
**Partisan Poor** (disadvantaged, pro-social welfare) This reliably Democratic group now supports Clinton at the same level as it does Democratic Congressional candidates (90%). It cares little about the character issue. Instead, like New Dealers, it is more likely to prefer Clinton because he stymied GOP Congressional efforts. Economically anxious and concerned about the safety net, this group prefers Clinton's position on Medicare over Dole's, 73% to 6%.

**Fractious Republicans**

There is much less unity among Republican groups. Only two in three populists (Moralists) are backing Dole. The former Senate Majority leader has actually lost a lot of ground among Libertarians since 1994, and is trailing Clinton among them. However, hardcore conservatives, who intensely dislike the President, are solidly behind Dole.

**Enterprisers** (affluent economic and social conservatives) This is one of two groups in which Dole has gained ground since 1994. Although strongly anti-Clinton (61% very unfavorable opinion), even this classic GOP group lacks enthusiasm for the GOP presidential nominee: nearly half (44%) say they are voting for Dole mainly because they don't like his opponents. Enterprisers are the only group in the electorate with a majority (61%) believing the Dole tax cut is good for the country.

**Moralists** (social conservatives, critical of big business and big government) The most economically anxious group among Republicans, Moralists are not convinced they will be better off with Dole in the White House. They don't think a 15% tax cut would be good for the country. They believe labor unions and business corporations have too much influence on who becomes President (57% and 62%, respectively). One-in-three (33%) have very unfavorable views of the President.

**Libertarians** (socially tolerant, conservatives) These moderates are unimpressed by Dole and his tax proposal. In fact, more of them have a favorable opinion of Clinton than Dole (53% vs. 35%), and more believe a 15% tax cut would be the wrong rather than the right thing for the country (50% vs. 40%). Moral appeals and Clinton's character problems have little impact on Libertarians. Two-thirds (67%) say Clinton's record is what matters most, while only 16% think character is most important. Among Republican groups Libertarians feel most strongly that churches have too much influence on who gets elected President.
Independents

While party unity and the lack of it are big factors in the race, the President's success in wooing the working class Independents represents the biggest percentage turn around since 1994. Perhaps with an assist from GOP Congressional leader Newt Gingrich, he has succeeded with the waitress moms and double shift dads who have no firm anchor in either party. Clinton has also held his own with the most distrustful and alienated voter group, the Embittered, whose natural tendency is to vote against incumbents.

New Economy Independents (middle income, weak party ties, female, mixed liberal/conservative values) These voters are far more likely to have favorable views of Clinton than Dole now (63% vs. 26%), whereas two years ago the two men were rated about evenly (Clinton 58%, Dole 54%). Economic anxiety remains high among them. They worry about the social safety net; by a margin of 47% to 11%, they prefer Clinton's approach to Medicare over Dole's. They want to hear more from the candidates about social issues, including education and health care. In their view, Clinton's presidential character (i.e. performance in office) outweighs concerns about his personal character. They give Clinton a big edge over Dole as the candidate who would use good judgment in a crisis (58% vs. 22%), is a strong leader (53% vs. 26%), cares about people like me (50% vs. 19%) and shares my values (49% vs. 28%).

The Embittered (cynical, distrustful, low income) A majority of this group holds an unfavorable opinion of both presidential candidates. It is the only non-Republican group in which Dole appears to have gained any ground since 1994. Attacks on Clinton's character have taken a toll on Clinton's image in this group, which is economically pressured and supports Dole's 15% tax cut proposal.

Dole’s Image

The respective campaign success and failure of Clinton and Dole with various constituencies emerges more clearly in the public’s assessment of each candidate’s personal character, attitudes and performance. In these measurements, Dole has lost ground or has not improved for the most part compared to seven months ago. For example, fewer voters now believe Dole, a man who spent a generation as a Senate leader, would use good judgment in a crisis, 37% vs. 42%. Since March he has dropped 10 percentage points among women on this measure and dropped 13 percentage points among voters 65 and older.

Clinton, on the other hand, has improved a great deal in one key performance measure, although the GOP campaign attacks on his character have also taken their toll. A majority now believes he has new ideas (51% vs. 43% last March). But his standing has dropped on the question of being honest and truthful (26% now vs. 32%) and on caring about people (46% now vs. 53%).

Beyond the trends, Clinton is evaluated better on most dimensions, often overwhelmingly, when the two candidates are compared directly in the latest Pew poll. Three times more voters say he is personally likeable, 66% vs. 20% for Dole; and by the same three-fold margin voters believe he connects well with ordinary Americans, 65% vs. 21% for Dole. Almost twice as many voters say he has new ideas (51% vs. 28% for Dole). Clinton is far better regarded than Dole in these respects among working class Independents and even among Republican-leaning Libertarians.

The President is viewed as a strong leader more often than Dole (47% vs. 36%) and credited with good judgment in a crisis by a similar margin. Only on whether he is considered honest and truthful does he lose big (26% vs. 42% for Dole), and marginally on whether he keeps his promises (32% vs. 36% for Dole).

The Race for Congress

Congressional voting intentions continue to divide closely, with 49% of registered voters saying they favor the Democratic candidate in their district, 42% for the Republican. The race is even narrower among likely voters: 48% for the Democratic candidate, 44% for the Republican.

At this point Democratic Congressional candidates seem to be benefitting from sex and age gaps in the electorate. The gender gap which has been so apparent in the presidential race is equally wide at the Congressional level. Women support Democratic Congressional candidates over Republicans by a margin of 54% to 36%, while men support Republicans over Democrats by a narrow 48% to 43% margin. In a generational divide, seniors favor Democrats over Republicans by nearly 20 percentage points. Among voters under 50, the race is a virtual dead heat.

The strongest supporters of Republicans for Congress are high income voters, white Protestant evangelicals, and white men -- especially non-southern white men. The Democrats run strongest among blacks, low income voters and city dwellers.

While the Democratic Party holds a slight lead in the Congressional generic ballot question, other cross currents in the electorate favor Republicans. Voters are more inclined to say their vote for Congress will be cast on the basis of state and local issues than was the case in 1994. This could bode well for Republican candidates because it suggests a lopsided Clinton victory may not impact badly on GOP Congressional races.
In addition, anti-incumbency sentiment is not as prevalent as it was in 1994. Some 62% of registered voters now say they would like to see their own representative reelected. Only 19% say they would not, a large decrease from October 1994, when 30% said their Congressman did not deserve reelection.

Finally, a slim plurality of voters say that, assuming Bill Clinton is reelected president, they prefer that the Republicans control Congress rather than the Democrats. Even one-in-four Clinton supporters share this interest in keeping the executive and legislative branches of government in separate hands.

The Pew typology also suggests that Republican Congressional candidates may survive this election even if their standard bearer is roundly defeated. The two Republican groups that show only lukewarm support for Dole are considerably more enthusiastic about Republican Congressional candidates. Eight-in-ten Moralists say they would vote for the Republican candidate for Congress from their district; an unimpressive 66% say they will vote for Dole. Libertarians, who actually support Clinton over Dole by a narrow margin, say they would vote Republican at the Congressional level by a margin of 60% to 29%.

The greatest potential danger for GOP Congressional candidates is that these traditionally Republican voters, who either unenthusiastically support Dole or grudgingly support Clinton, may decide to sit out the election altogether.

If Clinton maintains his commanding lead going into election day, the Republicans must count on split-ticket voting to maintain control of the House. The ticket splitters are most likely to come from the ranks of Republicans, namely the Moralists and the Libertarians, and from Independents, especially New Economy Independents.

**Campaign Themes**

More than two-thirds of the registered voters (68%) said there is a difference in approach to Medicare between Clinton and Dole. Most favor Clinton's plan, 39% to 24%. Among those who see a difference, Clinton's approach is favored among every age group, particularly those 65 years old and older, and among all income categories except those earning $50,000 a year or more. Significantly, white evangelical Protestants who see a difference in the two approaches are about evenly split between those favoring Dole's plan and those favoring Clinton's (32% and 29%), suggesting that health care has provided an issue on which Clinton has made inroads in Dole's popularity with this fundamentalist group. Along the same line, again among those who see a
difference in approaches, more Republicans favor Clinton's plan than Democrats who favor Dole's plan, 15% vs. 5%. And among voters who said they might support Dole in the election, almost three times as many favored Clinton's Medicare approach than favored Dole's (37% vs. 13%).

Dole's promise to cut taxes by 15% was, somewhat paradoxically, favored by most voters (54%) while at the same time most voters thought it was the wrong thing for the country (51%). The tax cut may have been the single proposal which backfired most on his candidacy, for it reversed his long-standing insistence that balanced budgets precede tax cuts, seems to have won over few voters, and was judged not in the national interest by most of the electorate.

All of the Republican and Independent groups among Pew's typology favored the tax cut, led by the wealthy and conservative Enterprisers (83%) and middle-class Moralists (68%), as did a single Democratic group, the New Dealers (51%), an older conservative classification. The other three Democratic groups, including the Partisan Poor, a very poor and disadvantaged older category of voters, opposed it. Only the Enterprisers said the tax cut would be the right thing for the country. Almost one in three Republicans (32%) said it would be wrong, as did more than half of Independents. Among Dole supporters, 22% said it would be wrong, and among Dole swing voters\(^2\), 52% said it would be wrong.

The electorate was equally divided on whether the person elected president can make a difference in dealing with rising drug use among teenagers: 48% yes, 48% no. But these gross figures mask major variations in attitude by age and sex. Young women were much more likely than young men to believe the president can make a difference: 52% vs. 39% of those under 30 years old. On the other hand, men 50 years old and older were more likely than women of the same age to believe the president can make a difference: 55% vs. 48%. Among religious denominations, white evangelical Protestants were more likely than non-evangelical white Protestants to see the President making a difference (53% vs. 44%). In partisan terms, Republicans saw the president making a difference more than did Democrats or Independents (55% vs. 49% and 42%, respectively), as did Dole supporters more than Clinton or Perot supporters (55% vs. 46% and 40%, respectively).

**Voter Fulfillment**

A strong majority of the electorate, 59%, is satisfied that important issues have been discussed by the Presidential candidates. One in three (35%), however, said important matters have been overlooked in the campaign. These are chiefly social issues, such as education and health care, followed by economic matters. Independents are less satisfied than Republicans or Democrats with the issues covered, as are Perot supporters compared to those favoring Clinton and Dole. Clinton supporters who are dissatisfied in this regard wanted to hear more about health care and education, while Dole's supporters wanted more about foreign policy and a balanced budget, and Perot's wanted

\(^2\) Registered voters who said there was "a chance" they might vote for Dole.
more on education and foreign policy.

A huge majority of voters (67%) believe that among four leadership groups in the country, the news media exerts too much influence on which candidate becomes president, followed by business corporations (59%), labor unions (45%) and the churches (15%). All of the Republican and Independent groups of the typology cited the media most often, led by the Enterprisers, 85% of whom saw the press in this light. A majority of New Democrats (54%) joined in this implicitly critical judgment of the media, while the three other Democratic groups most often saw business corporations as having too much influence on presidential elections.

**Less Anger At Government!**

The electorate appears to have a less negative view of government as the election nears. A decreased majority feels the government is almost always wasteful and inefficient now compared to recent years (56% vs. 64% in October 1994). The public is now split between those who believe government regulation of business is necessary to protect the public interest and those who believe government regulation usually does more harm than good (45% vs. 46%), but this is a significant and steady improvement since 1994 when a majority of 55% felt regulation does more harm than good and only 38% said it was in the public interest. Somewhat more Americans now believe most elected officials care what people like them think (38%, up steadily from 29% two years ago). And finally, marginally fewer Americans believe that elected officials in Washington lose touch with the people pretty quickly, again compared to two years ago.
This gentler attitude does not extend to blacks. A majority of voters (58%) believe African Americans who can't get ahead are mostly responsible for their own condition, up marginally from 53% and 54% in the past two years; a comparably marginal drop was found in those who believe racial discrimination is the main reason why African Americans can't get ahead (29% vs. 37% in October 1995 and 34% in October 1994).

91% ARE DEMOCRATS/LEAN DEM

Disadvantaged, largely southern, non-whites; want more government spending on poor; very religious and socially insensitive.
APPENDIX
About the Typology

The Times Mirror Center in 1987 developed a unique voter classification system based on three major elements -- party affiliation, political participation, and personal values and attitudes -- and using the statistical technique called "cluster analysis." The new typology developed in 1995 is built on the same foundation, with minor modifications.

Nine values and attitudes were measured, including attitudes toward government, environmentalism, business, social welfare, social policy issues, religion, race relations, the military, and feelings of political alienation.

The analysis segmented the American public into ten groups -- three Republican, four Democrat, and three in between:

The Divided Right
- Enterprisers (12% of adult population): Affluent, well-educated, and predominantly white. This classic Republican group is mainly characterized as pro-business, anti-government, anti-social welfare.
- Moralists (15%): Middle-aged, middle-income, predominantly white, religious (more than half are Evangelicals). This core Republican group is also socially intolerant and anti-social welfare, militaristic, anti-big business and anti-big government. Former Democrats drawn to the GOP's religious and cultural conservatism have increased in size substantially since 1987.
- Libertarians (7%): Highly-educated, affluent, predominately white male. This group has Republican lineage but is uncomfortable with today's GOP, particularly its religious right. Pro-business, anti-government, anti-social welfare but highly tolerant, very low on religious faith, cynical about politicians.

The Detached Center
- New Economy Independents (14%): Average income, young to middle aged, mostly female. This group is unanchored in either party and many supported Perot in 1992. It has many conflicting values: strongly environmentalist but not believers in government regulation; pro-social welfare but not very sympathetic to blacks; inclined to fundamental religious beliefs (highest white Catholic group) but highly tolerant of homosexuals.
- Bystanders (10%): Very young, poorly educated, with low income. This group opts out of the political process or are not eligible to vote (highest Hispanic concentration). Slightly more female than male, its only claimed commitment is to environmentalism.
- The Embittered (6%): Low income, low education, middle-aged. One in five of this group are black, one in three have children under 18. Old ties to Democrats have eroded but the Embittered feel unwelcome in the GOP. They distrust government, politicians, corporations. They are religious and socially intolerant. They strongly blame discrimination for lack of black progress, but are not strongly in favor of social welfare programs.
The "Not So" Left

- **Seculars** (7%): Highly educated, sophisticated, affluent, mostly white baby boomers and Generation X. The most socially tolerant group, driven by social issues, it is the only one to embrace the "liberal" label. Very low in religious faith. Highly pro-environment, pro-government, distrusting of business.

- **New Democrats** (12%): Mostly female, below average income and average education, includes a high proportion of white Catholics (30%) but also many white Evangelical Protestants (19%). Religious but not intolerant, more pro-business than other Democratic groups, they reject discrimination as a major barrier to black progress, are pro-government and environmentalist.

- **New Dealers** (8%): One of the oldest groups in the typology (three in ten over 65), below average education and low income. Once part of FDR's coalition, beneficiary of government programs, this group is now turned off by politics. Strongly conservative on race and social welfare, strong on religion, moderate on social tolerance, pro-America, distrustful of politicians and business.

- **Partisan Poor** (9%): Very poor (26% with household income under $20,000 a year), disadvantaged, about one in three in the south. Rooted in New Deal coalition, this group believes more government spending on the poor is needed. More than one-third are non-whites. Very religious and socially conservative.

* Includes leaners

**Question:** If the presidential election were being held TODAY, would you vote for the Democratic ticket of Bill Clinton and Al Gore, for the Republican ticket of Bob Dole and Jack Kemp, or for the Reform party ticket of Ross Perot and Pat Choate?

As of TODAY, do you lean more to Clinton and Gore, the Democrats; more to Dole and Kemp, the Republicans; or more to Perot, the Reform party candidate?

**Question:**
Now I’d like you to think about some concerns that people may have. How concerned are you, if at all, about (INSERT ITEM: ROTATE)? Are you very concerned, somewhat concerned, not too concerned, or not at all concerned about this? What about (NEXT ITEM)...?
- Not having enough money for your retirement?
- Being unable to save enough money to put a child through college?
- Being unable to afford necessary health care when a family member gets sick?

SURVEY METHODOLOGY
ABOUT THIS SURVEY

The survey results are based on telephone interviews conducted under the direction of Princeton Survey Research Associates among a nationwide sample of 1,938 adults (1,546 registered voters), 18 years of age or older, during the period October 14-20, 1996. For results based on the total sample one can say with 95% confidence that the error attributable to sampling and other random effects is plus or minus 2 percentage points. For results based on the registered voters one can say with 95% confidence that the error attributable to sampling and other random effects is plus or minus 3 percentage points. For results based on the likely voters one can say with 95% confidence that the error attributable to sampling and other random effects is plus or minus 3 percentage points. For results based on either Form 1 (N=769) or Form 2 (N=777), the sampling error is plus or minus 4 percentage points.

In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.
SURVEY METHODOLOGY IN DETAIL

The sample for this survey is a random digit sample of telephone numbers selected from telephone exchanges in the continental United States. The random digit aspect of the sample is used to avoid "listing" bias and provides representation of both listed and unlisted numbers (including not-yet-listed). The design of the sample ensures this representation by random generation of the last two digits of telephone numbers selected on the basis of their area code, telephone exchange, and bank number.

The telephone exchanges were selected with probabilities proportional to their size. The first eight digits of the sampled telephone numbers (area code, telephone exchange, bank number) were selected to be proportionally stratified by county and by telephone exchange within county. That is, the number of telephone numbers randomly sampled from within a given county is proportional to that county's share of telephone households in the U.S. Estimates of the number of telephone households within each county are derived from 1990 Census data on residential telephone incidence that have been updated with state-level information on new telephone installations and county-level projections of the number of households. Only working banks of telephone numbers are selected. A working bank is defined as 100 contiguous telephone numbers containing three or more residential listings.

The sample was released for interviewing in replicates. Using replicates to control the release of sample to the field ensures that the complete call procedures are followed for the entire sample.

At least four attempts were made to complete an interview at every sampled telephone number. The calls were staggered over times of day and days of the week to maximize the chances of making a contact with a potential respondent. All interview breakoffs and refusals were re-contacted at least once in order to attempt to convert them to completed interviews. In each contacted household, interviewers asked to speak with the "youngest male 18 or older who is at home". If there is no eligible man at home, interviewers asked to speak with "the oldest woman 18 or older who lives in the household". This systematic respondent selection technique has been shown empirically to produce samples that closely mirror the population in terms of age and gender.

Non-response in telephone interview surveys produces some known biases in survey-derived estimates because participation tends to vary for different subgroups of the population, and these subgroups are likely to vary also on questions of substantive interest. In order to compensate for these known biases, the sample data are weighted in analysis.

The demographic weighting parameters are derived from a special analysis of the most recently available Census Bureau's Current Population Survey (March 1994). This analysis produced population parameters for the demographic characteristics of households with adults 18 or older, which are then compared with the sample characteristics to construct sample weights. The analysis only included households in the continental United States that contain a telephone.

The weights are derived using an iterative technique that simultaneously balances the distributions of all weighting parameters.
Hello, I am _____ calling for Princeton Survey Research Associates in Princeton, New Jersey. We are conducting a telephone opinion survey for leading newspapers and TV stations around the country. I'd like to ask a few questions of the youngest male, 18 years of age or older, who is now at home. [IF NO MALE, ASK: May I please speak with the oldest female, 18 years of age or older, who is now at home?]

ALL NUMBERS IN SURVEY, INCLUDING TREND FIGURES, ARE BASED ON REGISTERED VOTERS EXCEPT WHERE NOTED

ASK ALL:

Q.3 How much thought have you given to the coming Presidential election . . . quite a lot or only a little?

**ASK ALL:**
**ON ANOTHER SUBJECT...**

Q.14 I'm going to read you some pairs of statements that will help us understand how you feel about a number of things. As I read each pair, tell me whether the FIRST statement or the SECOND statement comes closer to your own views -- even if neither is exactly right. The first pair is... *(READ AND ROTATE)* **AFTER CHOICE IS MADE, PROBE:** Do you feel STRONGLY about that, or not?

---
